

Architectural Changes Description

- 1) Massing revision for the South side of the building includes offsetting wall planes 16" inside. It created another arched column look with French balcony inside. This element aims to break up the large surface, adding visual depth.
- 2) Increasing column width, extending molding bands, and replacing flat roofs with pitched roofs all contribute to making the building appear less tall.
- 3) Removing top Grand Molding from Flat roof towers and adding Pitched (sloped) roof over.
- 4) Integration of barrel tiles roofing over towers
- 5) Adjusting window proportions and alignment
- 6) Color palette changing
- 7) Simplification of the railings
- 8) Reduction of redundancy in arch elements over all the windows at all sides
