

### 3.1.4. Building Placement Requirements

- A. **Setbacks.** Building setbacks determine the distance between the buildings on a lot and the property lines (front, side, and rear). Building setbacks shall be measured from the closest point of the base of the wall of the structure to the lot line. Where property lines extend into the paved or improved portion of the right-of-way, and on RMH, RMHP, and RMHS zoned property, setbacks are measured from the edge of pavement or improved surface. Setbacks are designated by a front setback requirement, side setback requirements, and a rear setback requirement. Easements shall not be considered a public right-of-way or private street for the purpose of designating a front yard and front setback. It is understood, for the purpose of calculating setback requirements and yards, three configurations of lots exist: interior lots, corner lots, and through lots (see graphic examples in this section).
