## City of Venice Engineering Department

**To:** Edward Lavalley, City Manager *EL*

**From:** Kathleen J. Weeden, PE, City Engineer *KJW*

**Date:** March 8, 2017

**Subject:** City Council Meeting 03/28/2017  
2017 City of Venice Stormwater Pipes Rehabilitation

**Background:** In 2016, the City hired a contractor to conduct cleaning and TV inspection on a portion of the City's stormwater pipes; and provide a written assessment with recommendations. The Engineering department has evaluated this data in order to prioritize the proposed stormwater cured in place pipe lining and joint repairs. Additionally, the pipes targeted by this contract are within roadways which will be repaved during Phase 1 of the road bond project. It is important to make these pipe repairs prior to resurfacing these roads to avoid future damage to the new pavement.

Sarasota County issued and received bids (Bid #111408CS) for Stormwater Pipeline Infrastructure Rehabilitation Contract. City staff has reviewed the scope of work from that solicitation and found it meets the needs of the City. Utilization of the cooperative purchase (piggyback) would allow the City to immediately proceed with this work.

CIPP sectional lining is a specialized process requiring extensive materials and equipment. Few local contractors have these capabilities and the submittals in response to solicitations usually come from the same group of contractors. It is unlikely that a formal bid issued by the City will net a different or better result; especially based on the size of the proposed project.

**Requested Council Action:** Approval of cooperative purchase with Layne Inliner, LLC utilizing Sarasota County contracts 2014-034 & 2014-035 and authorize the Mayor to execute the attached Work Assignment for stormwater pipeline rehabilitation in the amount not to exceed \$146,367.22.

**City Attorney Review:** Approved.

**Risk Management:** Approved.

**Funding Availability:** Funding is available in Account #480-0950-541.63-00
