Civil Engineering and Land Development Consulting

# Project Narrative and Comprehensive Plan Consistency

Mcleod Recycling Yard - 700 Gene Green Road Parcel I.D. 0365001070 May 26, 2017

# **Project Description:**

The applicant, 700 Gene Green, LLC proposes to operate a construction materials sorting, processing and loading operation on this property. The processing will include crushing, screening, gradation and stockpiling of raw concrete materials to produce recycled graded aggregate for use in road construction base materials through-out the Southwest Florida region.

Initial operations will be performed at the site in it's current condition with the use of a mobile concrete crushed as permitted by the State Department of Environmental Protection Air Permit and State NPDES general permit. Further improvements will include construction of a truck scale, scale house building, on-site sewer & water utilities and stormwater drainage improvements as shown by the submitted site construction plans to provide for the continued material processing and sale of finished concrete graded aggregate to other end users including contractors and municipalities. Proposed stormwater facilities are being sized to accommodate the proposed on-site new impervious areas and a future ready-mix concrete plant development on adjacent property.

# Comprehensive Plan Consistency:

All proposed operations and site improvements are consistent with the City of Venice Comprehensive Plan for the Gene Green Sector planning area as follows:

<u>Policy 8.2 Land Use Compatibility</u> – The proposed land use is consistent in density, intensity, building height, setbacks and character of use in the existing uses. City properties to the west and south west currently conduct similar industrial uses and construction material processing with industrial type facilities and architecture. Building heights and setbacks are consistent with the site and adjacent city property zoning classifications.

<u>Policy 16.24 Gene Green Sector Uses</u> – The proposed land use and concrete material recycling operations are consistent with the material sorting, processing, loading and recycling uses programmed for this planning area with the proposed commercial building FAR of 0.002 being within the allowable 0.10 FAR.

<u>Policy 16.25 Gene Green Sector Compatibility</u> - Proposed and existing vegetative buffers and shear distance provide adequate buffer to residential uses located in excess of 4,500 feet south of the project site.
