Subject: Porta Vista Development

Dear Council Members,

As neighbors of the proposed towers on Roberts Bay, we are concerned about the the construction and increased height variance for the following reasons:

1. The added height will set a precedent for future construction at the same or increased height. This increased height will and already has contributed to a more congested and less scenic perception of Venice. At what point do we stop sacrificing the beautiful views of sunrises, sunset, and our most important attribute - the water?

2. No mention of the lighting being proposed for these towers has been made. What is planned? Being directly across the bay from the construction, we are concerned about how these buildings will be lit at night, and the subsequent light pollution. We ask for the sake of those who live in close proximity to these towers that careful consideration be put into the selection of lights that are placed on the buildings themselves as well as in the parking lot and other areas surrounding the buildings.

Thank you.

Sincerely,

Paul Bina and Jacqueline Fay
