Mini Reef

Mini Reef Facts.

- **A Mini Reef can contain 150,000 animals from over 350 different species.**
- **A Mini Reef can clean on average 30,000 gallons of seawater everyday.**
- **65 different species of fish have been found using Mini Reefs as home.**
- **Mini Reefs can raise over 60 stone crabs or blue crabs per year.**
- **Mini Reefs can raise over 50 spiny lobsters per year.**
- **The Mini Reef is built of materials that will last decades in saltwater.**
- **99.972% of Mini Reefs survived hurricane Irma without damage.**
- **Mini Reefs can now be found in 61 cities around the state.**
- **Mini reefs are also in the water in Alabama and the Bahamas.**
- **Mini reefs are now being used by Mote Marine Labs in their research to combat red tide along our coastlines.**

Testimonials

“We saw early on a marked increase not only in the number of the small "bait fish" but also in the diversity of the larger game fish; some of which we had not seen in almost 20 years here on the canal. It is truly a testament to the success of these artificial reefs that we continue to this day to enjoy further increases. Along with the myriads of bait fish, Mangrove Snapper, and small Sea Trout, we have now seen Snook again and Tarpon, for the first time, swimming at our dock as well.”- Dr. Peter Foster, Marco Island

“Even this early in its growth, we are seeing extraordinary amounts and species of fish under our dock. We went out last night and there was a school of about (30) mangrove snappers feeding in and about the reef. Just activity in general around and under our dock has increased tremendously since installing the reef.”- Andy Vogelsang, Marco Island
