## Professional Engineer's Certification

I hereby certify that I am a Licensed Professional Engineer in the State of Florida practicing with Stantec Consulting Services Inc. and that I have supervised the preparation of and approve the evaluations, findings, opinions, conclusions, and technical advice hereby reported for:

**PROJECT:** GCCF Property  
Transportation Impact Analysis  
215810792

**LOCATION:** East of I-75 between Border Road and Laurel Road in Venice, Florida

This document titled GCCF Property Transportation Impact Analysis was prepared by Stantec Consulting Services Inc. for the account of Neal Communities. The material in it reflects Stantec's best judgment in light of the information available to it at the time of preparation. Any use which a third party makes of this report, or any reliance on or decisions made based on it, are the responsibilities of such third parties. Stantec Consulting Services Inc. accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

Prepared by:

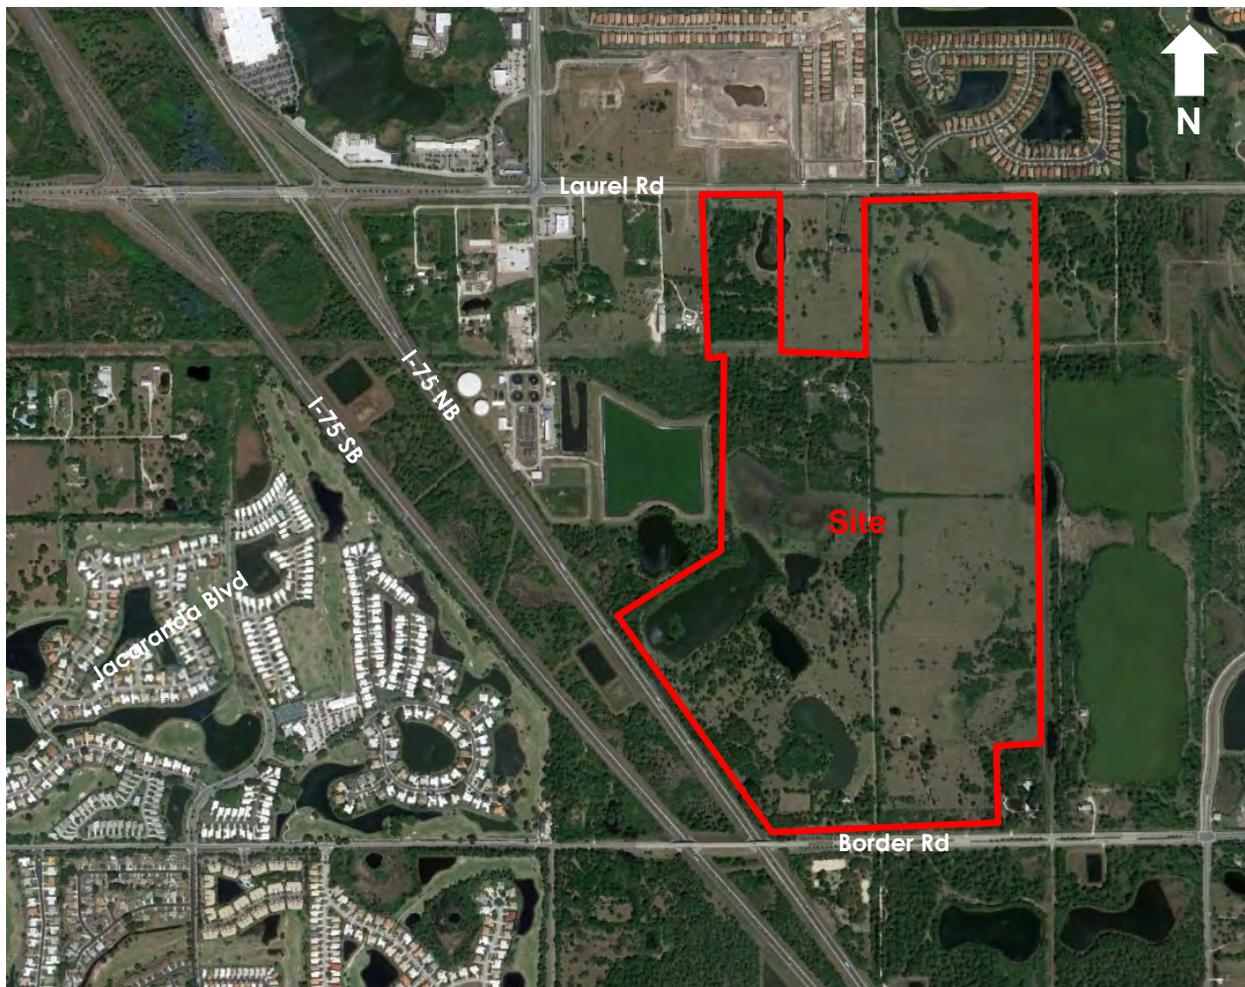

Matthew R. Crim, P.E., No. 68297  
Transportation Engineer  
Florida Licensed Engineer No. 68297

Date

## Introduction

The purpose of this study is to determine the transportation impacts of the proposed GCCF Property located east of I-75 between Border Road and Laurel Road in Venice, Florida. The proposed development is shown in **Figure 1**.

The property is currently vacant. The petitioner proposes to construct a maximum of 1,300 dwelling units; 550 single-family detached dwelling units and 750 multi-family dwelling units. The development will have four external access points, two to Laurel Road and two to Border Road. The transportation impact analysis assumed a worst-case scenario ignoring the optional fifth access point interconnecting with the property to the east. If constructed, the interconnection will serve to reduce vehicular demand at the four external access points to Laurel Road and Border Road. The build-out year for the development is 2025. Prior to undertaking the study, a methodology statement was submitted to the City of Venice on September 12, 2018, and approved on September 13, 2018. A copy of the methodology is attached in Appendix A.

**Figure 1: Project Location**

## Trip Generation

Traffic volumes generated by the project were estimated using the Institute of Transportation Engineers (ITE), Trip Generation Manual – the 10<sup>th</sup> Edition (2017). Land Use Code 210 (Single-Family Detached Housing) and Land Use Code 220 (Multifamily Housing Low-Rise) were used to estimate the PM peak-hour trip generation potential. The estimated external trips generated by the development are 877 PM peak-hour two-way trip ends (553 entering; 324 exiting). The trip generation results are summarized in **Table 1**.

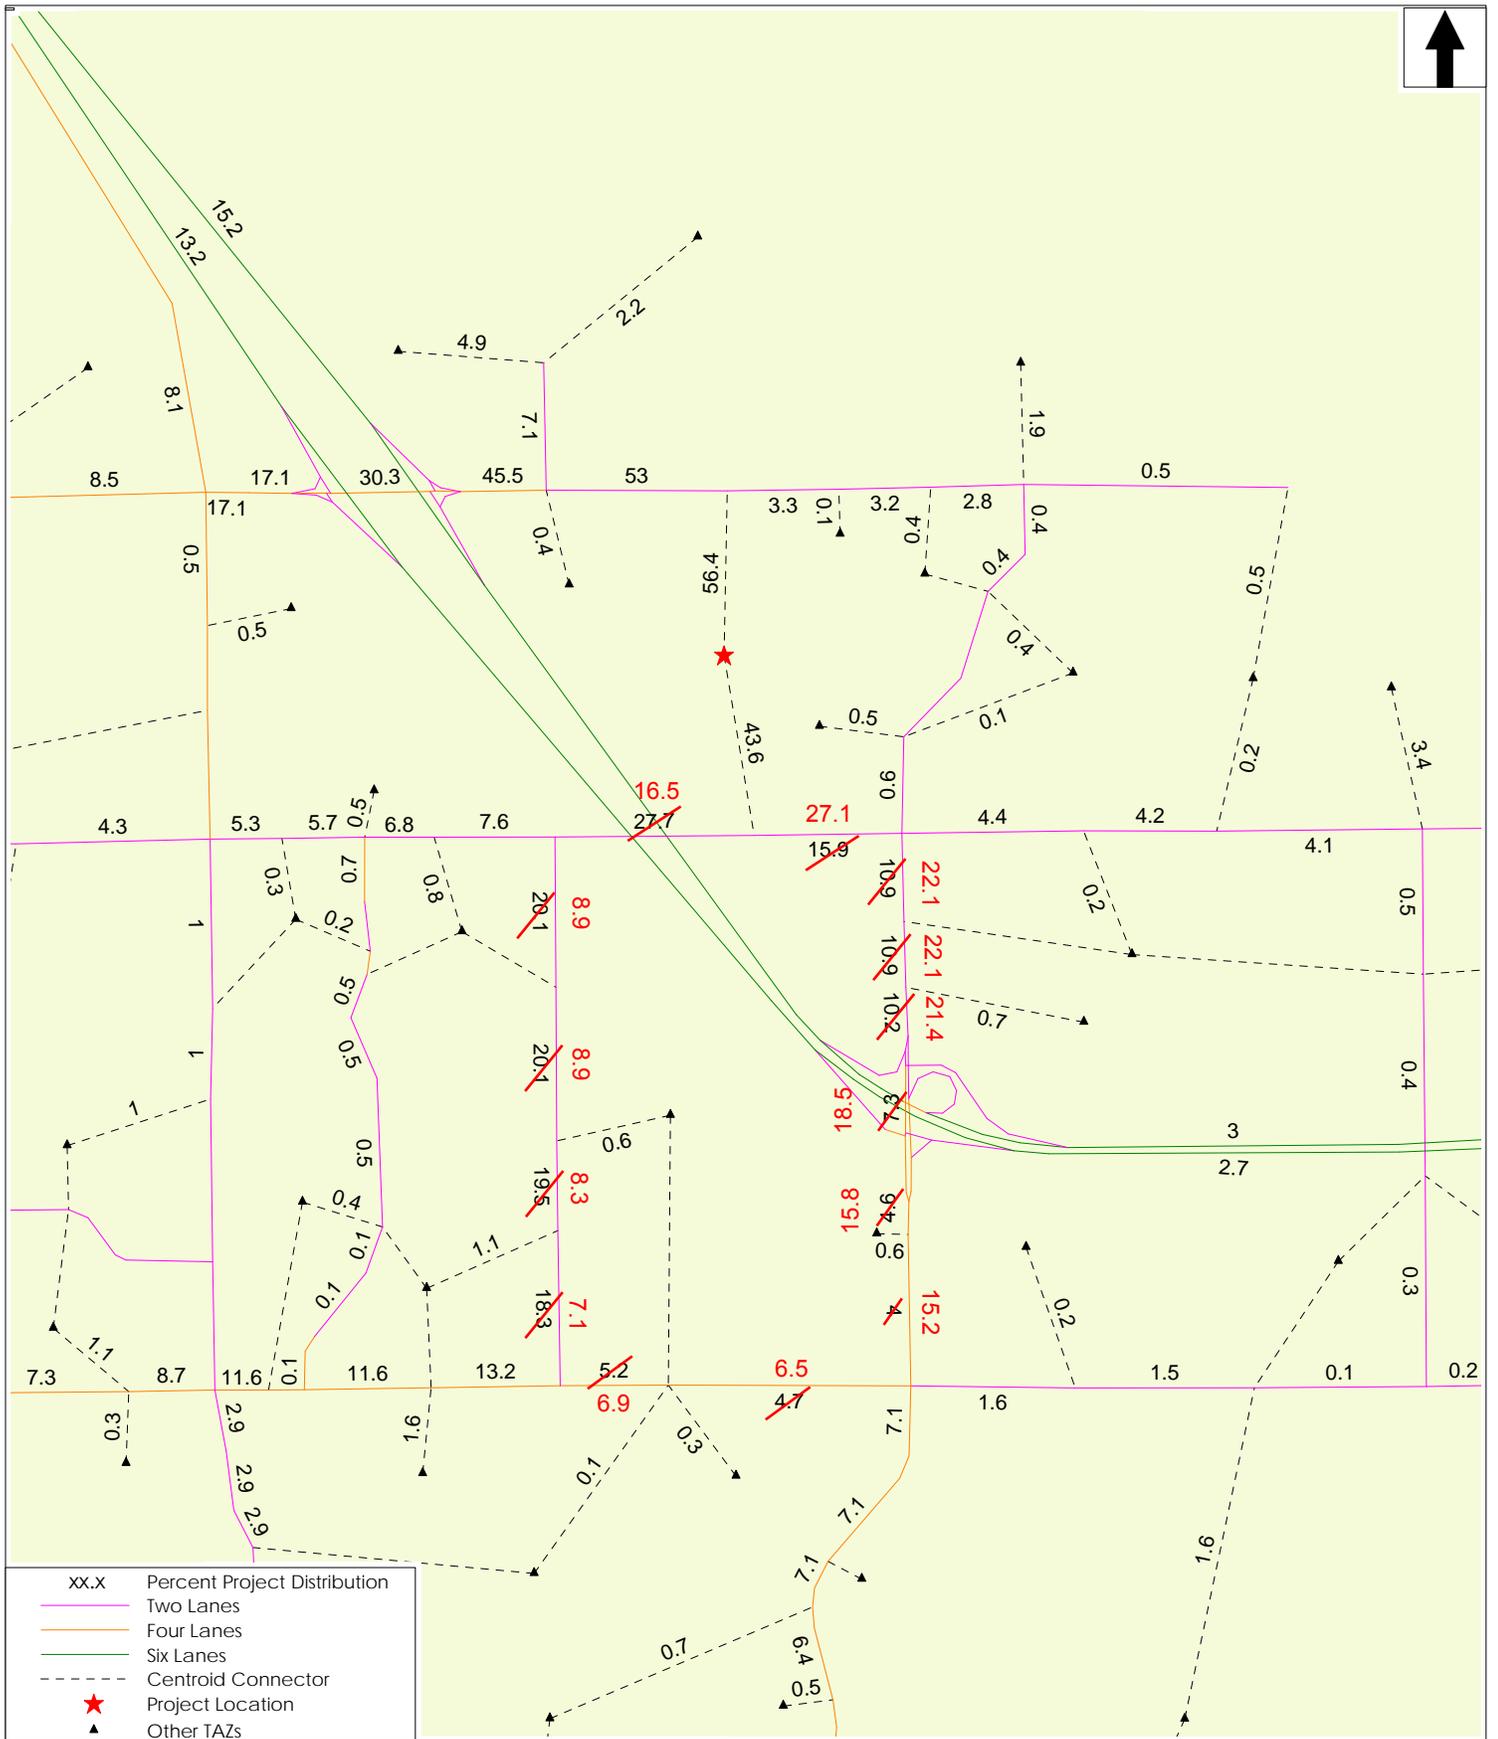

**Table 1: PM Peak-Hour Trip Generation**

ITE Land Use Category	Variable	Size	PM Peak Trip Rate/ Equation	PM Enter Split	PM Exit Split	PM Peak Total Trips		
						Total	Enter	Exit
Single-Family Detached Housing - 210	Per Unit	550	$\ln(T) = 0.96\ln(x) + 0.20$	63%	37%	522	329	193
Multifamily Housing (Low-Rise) - 220	Per Unit	750	$\ln(T) = 0.89\ln(x) - 0.02$	63%	37%	355	224	131
<b>TOTAL</b>						<b>877</b>	<b>553</b>	<b>324</b>

## Project Traffic Distribution/Assignment

Traffic generated by the proposed project was distributed and assigned to the adjacent roadway network using the FDOT D1 Districtwide 2018 Existing plus Committed travel demand model with 2040 socioeconomic data. Based on discussions with City staff, a manual adjustment to the travel demand model distribution was made to remove north-south project traffic assigned to Auburn Road and shift those trips onto Jacaranda Boulevard, a more likely north-south route.

The project traffic distribution is shown in **Figure 2**. Once the distribution was determined, project traffic was assigned to all functionally classified roadways listed in Sarasota County’s 2016 *Generalized Level of Service Analysis Table*. The project traffic assignment on functionally classified roadways is shown in **Figure 3**.

**Figure 2: Project Traffic Distribution  
2018 Existing Plus Committed Network  
GCCF**

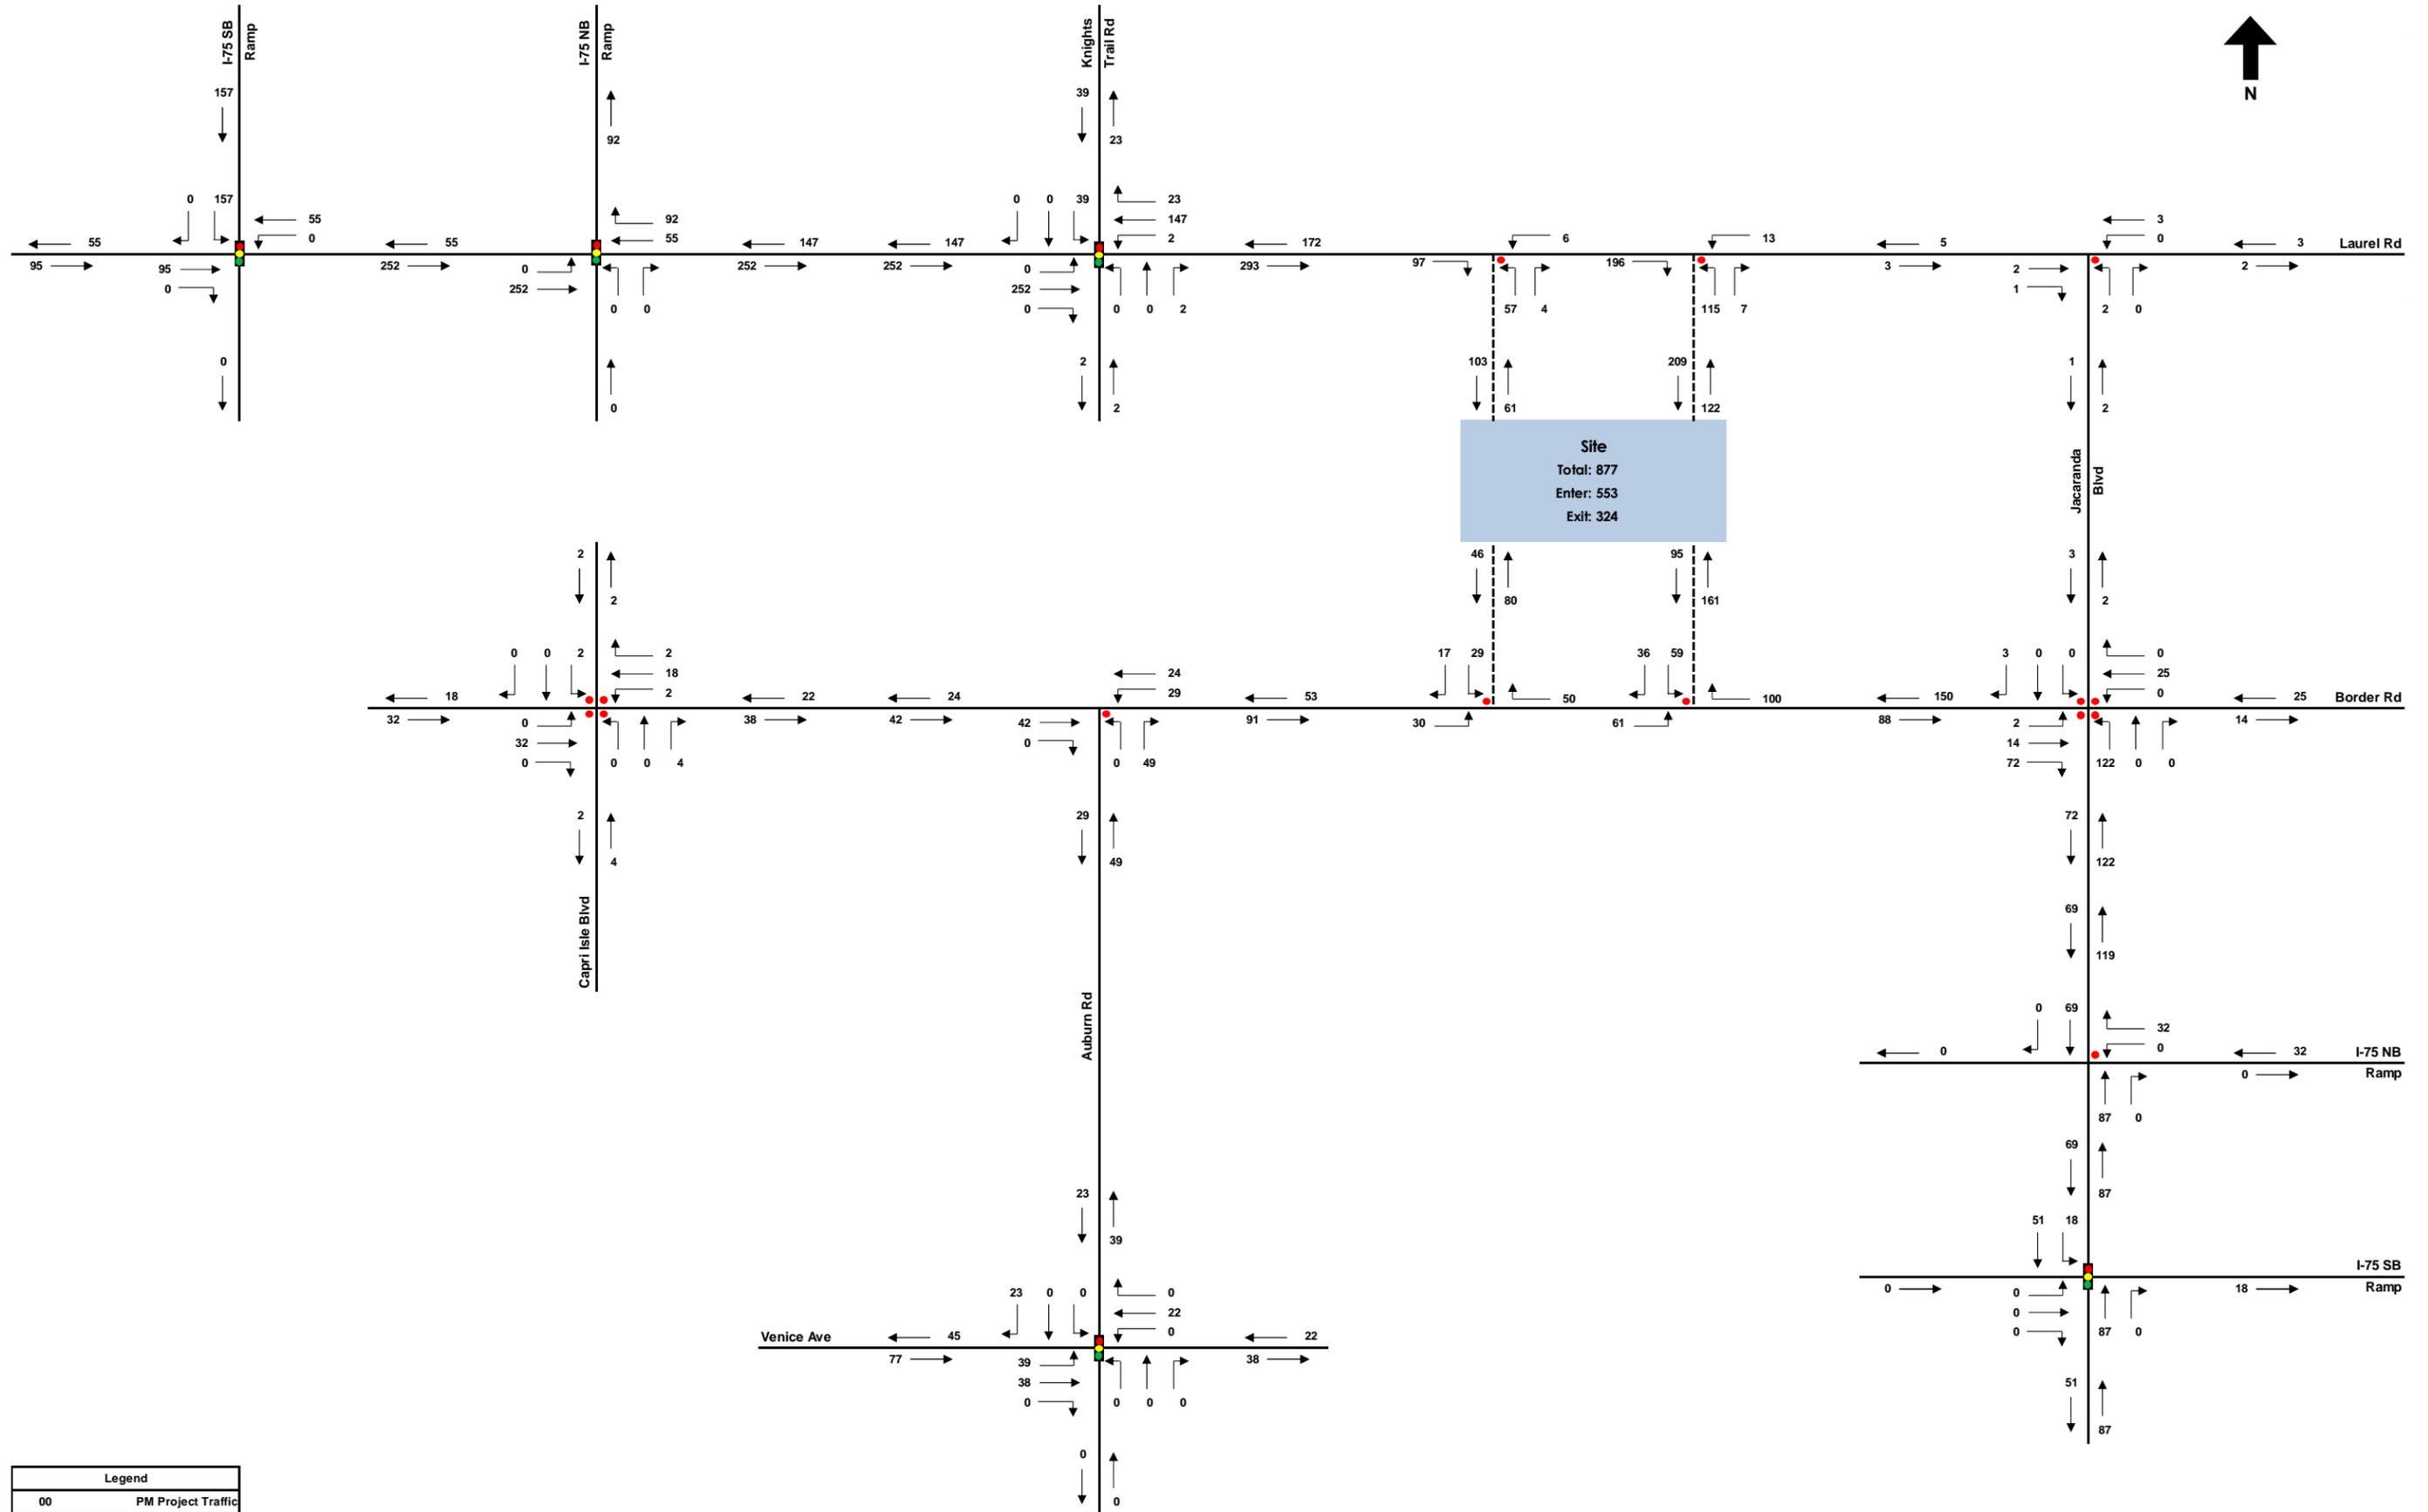

Figure 3: Project Traffic Assignment

## Study Area

The study area consists of arterial and collector roads in which project traffic is expected to consume at least 4.5 percent of the peak-hour two-way level-of-service standard or any roadway segment to which the development has direct access or which the development accesses via local and private roads.

The results of the study area determination are provided in **Table 2**. Per the City of Venice's criteria, 10 regulated roadway segments meet the significance threshold and were evaluated as part of this analysis.

**Table 2: Study Area Determination**

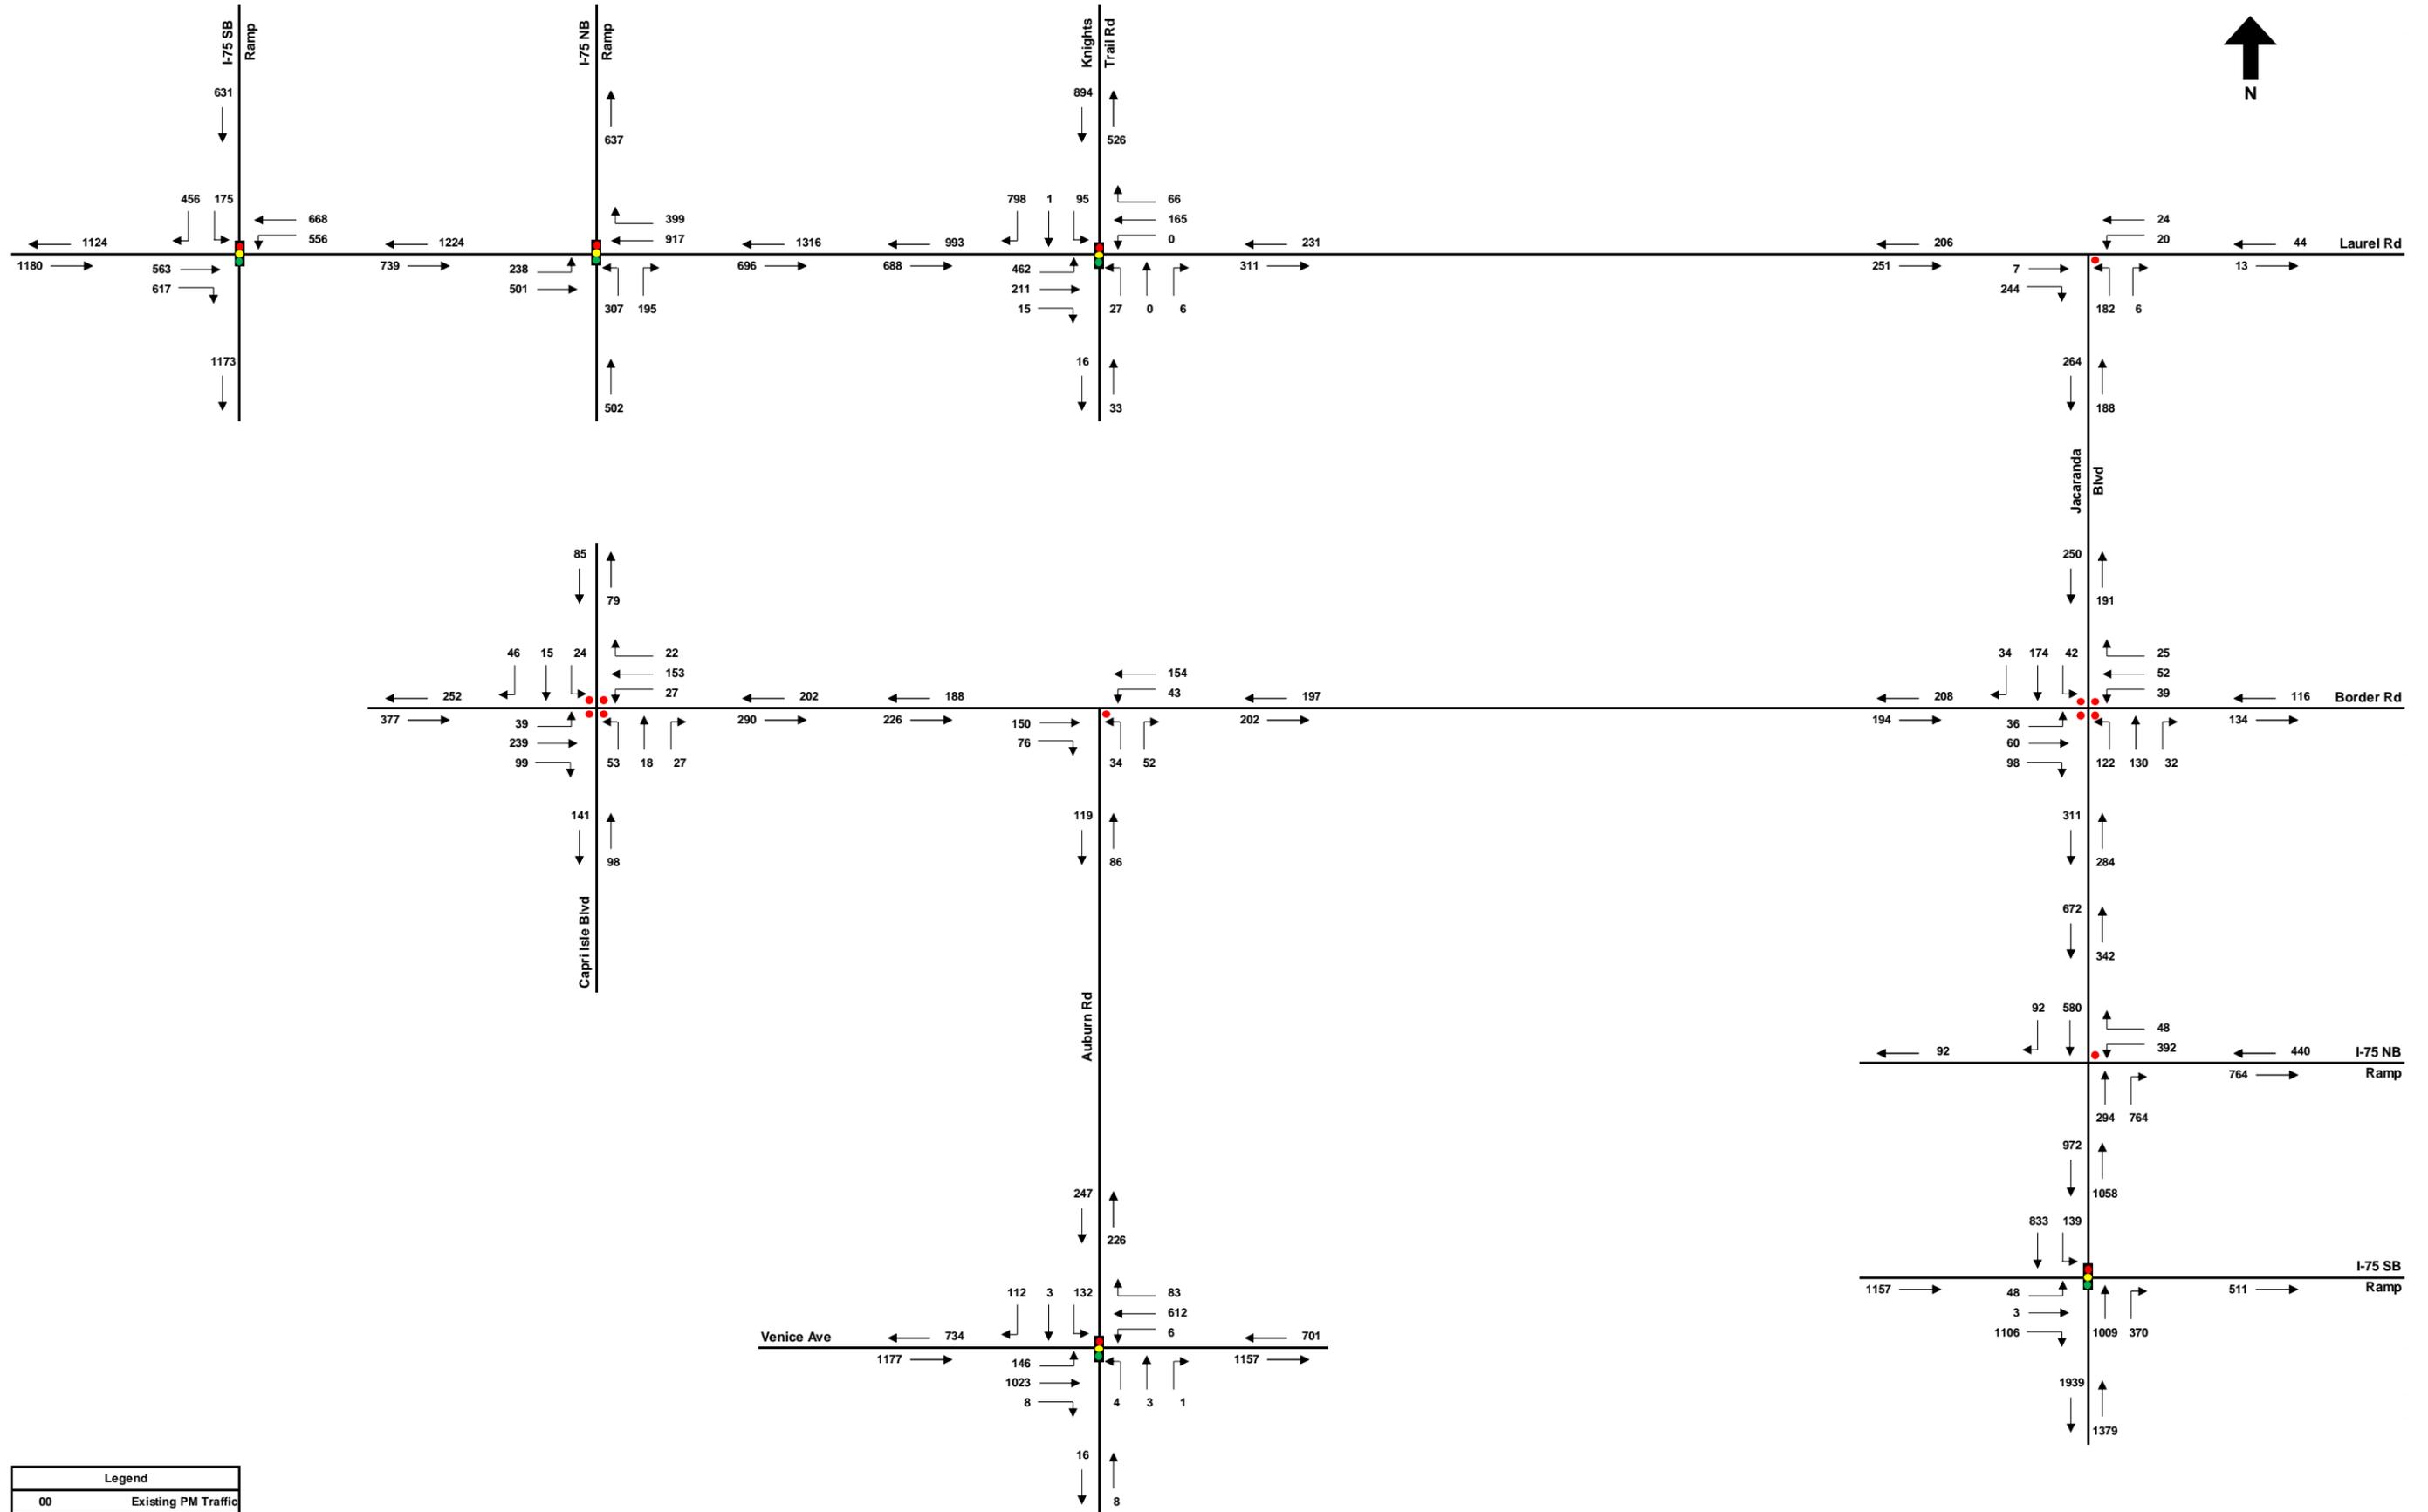

Road Name and Segment	Adopted LOS			Percent Project Traffic	New Project Traffic		Significant Impact? (>4.5%)	Direct Access?
	LOS Standard	Number of Lanes	Service Volume		Trips	% Impact		
<b>Auburn Road</b>								
Border Rd to Venice Ave	D	2	1,197	8.0%	70	5.8%	Yes	No
<b>Border Road</b>								
Auburn Rd to Site	D	2	1,264	16.5%	145	11.5%	Yes	No

Jacaranda Blvd to River Rd	B	6	6,130	5.7%	50	0.8%	No	No
<b>Jacaranda Boulevard</b>								
Laurel Rd to Border Rd	D	2	1,330	0.5%	4	0.3%	No	No
Border Rd to I-75 NB	D	2	1,510	21.8%	191	12.6%	Yes	No
I-75 NB to I-75 SB	D	4	3,401	18.5%	156	4.6%	Yes	No
I-75 SB to Executive/Commercial	D	4	3,401	15.8%	139	4.1%	No	No
Executive/Commercial to Venice	D	4	3,401	15.2%	133	3.9%	No	No
Venice to Center	D	4	3,401	7.1%	62	1.8%	No	No
<b>Knights Trail</b>								
Laurel Rd to Rustic Rd	D	2	1,440	7.1%	62	4.3%	No	No
<b>Laurel Road</b>								
Pinebrook Rd to I-75 SB	D	4	3,401	17.1%	150	4.4%	No	No
I-75 SB to I-75 NB	D	4	3,401	30.3%	307	9.0%	Yes	No
I-75 NB to Knights Trail Rd	D	4	3,401	45.5%	399	11.7%	Yes	No
Knights Trail Rd to Site	D	2	1,440	53.0%	465	32.3%	Yes	Yes
Site to Jacaranda Blvd	D	2	1,440	3.4%	30	2.1%	No	Yes
Jacaranda Blvd to Citadella Dr	D	2	1,440	0.5%	4	0.3%	No	No
<b>Venice Ave</b>								
Capri Isles Blvd to Auburn	D	4	3,222	12.4%	109	3.4%	No	No
Auburn to Jacaranda	D	4	3,222	6.7%	59	1.8%	No	No
Jacaranda to Jackson	D	2	1,120	0.9%	8	0.7%	No	No

In addition to the roadway segments evaluated in the study area, intersections of regulated roadways within the study area as well as the four site access connections were evaluated. The 10 regulated roadway intersections that were studied are listed below.

1. I-75 SB/Laurel Rd
2. I-75 NB/Laurel Rd
3. Knights Trail/Laurel Rd
4. Jacaranda Blvd/Laurel Rd
5. Capri Isles Blvd/Edmondson Rd
6. Auburn Rd/Border Rd
7. Jacaranda Blvd/Border Rd
8. Jacaranda Blvd/I-75 NB
9. Jacaranda Blvd/I-75 SB
10. Auburn Rd/E Venice Ave

## 2018 Existing Traffic Conditions

Vehicle turning movement counts were conducted at the study area intersections on Wednesday September 19, 2018. The turning movement counts were taken during the PM peak period (4:00 PM to 6:00 PM) to quantify existing PM peak-hour conditions. The turning movement counts then were adjusted by FDOT's peak-season conversion factor of 1.40. The existing PM peak-hour peak-season traffic volumes are shown in **Figure 4**. The peak-season factors, turning movement counts, and signal timing information are attached in Appendix B.

Legend	
00	Existing PM Traffic

Figure 4: Existing PM Peak-Hour Peak-Season Traffic

## ROADWAY ANALYSIS

Roadway segmentation and maximum service volumes were taken from Sarasota County's 2016 *Generalized Level of Service Analysis Table*. Existing segment volumes were obtained from the peak-season volumes entering/exiting the intersections during the peak-hour. The results of the 2018 existing level-of-service analysis are summarized in **Table 3** and indicate that all segments within the study area are operating at acceptable level-of-service standards.

**Table 3: 2018 Existing Segment Conditions**

Road Name and Segment	Adopted LOS			Existing Traffic	Exceeds LOS?
	LOS Standard	Number of Lanes	Service Volume		
<b>Auburn Road</b>					
Border Rd to Venice Ave	D	2	1,197	339	No
<b>Border Road</b>					
Auburn Rd to Site	D	2	1,264	399	No

<b>Edmondson Road</b>					
Capri Isles Blvd to Auburn Rd	D	2	931	453	No
<b>Jacaranda Boulevard</b>					
Border Rd to I-75 NB	D	2	1,510	805	No
I-75 NB to I-75 SB	D	4	3,401	2,030	No
<b>Laurel Road</b>					
I-75 SB to I-75 NB	D	4	3,401	1,963	No
I-75 NB to Knights Trail Rd	D	4	3,401	1,847	No
Knights Trail Rd to Site	D	2	1,440	542	No
Site to Jacaranda Blvd	D	2	1,440	457	No

## INTERSECTION ANALYSIS

The intersection analysis was performed using Trafficware's Synchro 10 Software (using HCM 6<sup>th</sup> Edition methodology). If the HCM 6<sup>th</sup> Edition methodology could not be applied at a signalized intersection, the HCM 2000 methodology was used. As part of the analysis, existing lane geometry was used at the study intersections. The City of Venice has an adopted level-of-service standard of D. Each movement was checked to ensure that the level-of-service D standard was met. In some cases, it is not realistic to improve an individual movement's level-of-service to D, in those cases an explanation of why was provided. The results of the Synchro intersection analysis are summarized in **Table 4** and indicate that six intersections currently operate at acceptable level-of-service standards. The I-75 SB Ramp/Laurel Road, Jacaranda Boulevard/I-75 NB Ramp, Jacaranda Boulevard/I-75 SB Ramp, and Auburn Road/Venice Avenue intersections are currently operating at unacceptable level-of-service standards with at least one movement operating at level-of-service E.

**Table 4: 2018 Existing Intersection Conditions**

Intersection	Type	Overall Intersection LOS		Delay (sec/veh)	Max v/c Ratio	Approach LOS			
		Standard	Existing			EB	WB	NB	SB

1. Delay shown for the worst approach.

2. No left-turn movement for approach.

3. Left-turn movement level-of-service.

The intersection volume tables are provided in Appendix C. The 2018 existing Synchro intersection worksheets are provided in Appendix D and electronic versions of the files are attached on the accompanying DVD.

## Scheduled Improvements

The current Sarasota County and City of Venice Capital Improvement Programs (CIPs) and the FDOT Five Year Work Program were reviewed to identify any improvements scheduled in the first three years to be included in the analysis. No improvements were identified in the study area.

In addition, improvements that will be completed with the vested projects were included for the future traffic conditions. The improvements identified were:

- Add a second westbound left-turn lane along Laurel Road at the I-75 SB Ramps. (Triple Diamond Commerce Park mitigation)
- Extend the eastbound left-turn lanes along Laurel Road at Knights Trail Road. (Portofino mitigation)

## 2025 Background Traffic Conditions

The background traffic conditions were analyzed for the build-out year of 2025. The background traffic conditions consist of the existing PM peak-hour peak-season traffic volumes, an annual background growth rate, and vested traffic volumes from approved projects.

- Annual Average Daily Traffic (AADT) volumes, obtained from the Sarasota County *Generalized Level of Service Tables* for roadway segments in the vicinity of the project, indicate a historic annual growth rate of 4.29% for the last five years and a negative growth rate for the last ten years. The historic growth rates are shown in **Table 5**. A two percent annual growth rate was used to forecast future background traffic.

**Table 5: Historic Growth Rates**

Road Name and Segment	2006 AADT	2011 AADT	2016 AADT	5-YR Growth Rate	10-YR Growth Rate
<b>Auburn Road</b>					
Border Rd to Venice Ave	3,072	2,803	2,148	-5.18%	-3.51%
<b>Border Road</b>					
Auburn Rd to Jacaranda Blvd	--	2,124	2,741	5.23%	--
<b>Edmondson Road</b>					
Capri Isles Blvd to Auburn Rd	--	2,747	--	--	--
<b>Jacaranda Boulevard</b>					
Laurel Rd to Border Rd	--	--	3,371	--	--
Border Rd to I-75	--	2,193	4,845	17.18%	--
I-75 to Executive/Commercial	29,407	23,655	24,158	0.42%	-1.95%
<b>Laurel Road</b>					
Pinebrook Rd to I-75	17,352	11,269	19,261	11.32%	1.05%
I-75 to Jacaranda Blvd	--	13,227	15,027	2.58%	--
<b>TOTAL</b>	<b>49,831</b>	<b>55,271</b>	<b>68,180</b>	<b>4.29%</b>	<b>-0.89%</b>

- Vested traffic from the unconstructed portions of the SJMR PUD, Toscana Isles, Plaza Venezia, Portofino, the Woods at Venice, the Milano PUD (Villages of Milano [VICA] and Laurel Lakes), Murphy Oaks, and Laurel Road Storage Facility were added as part of the background traffic. The applicable pages from the traffic studies showing the volumes at the study area intersections are attached in Appendix E.

The 2025 PM peak-hour background traffic volumes are shown in **Figure 5** as well as in Appendix C.

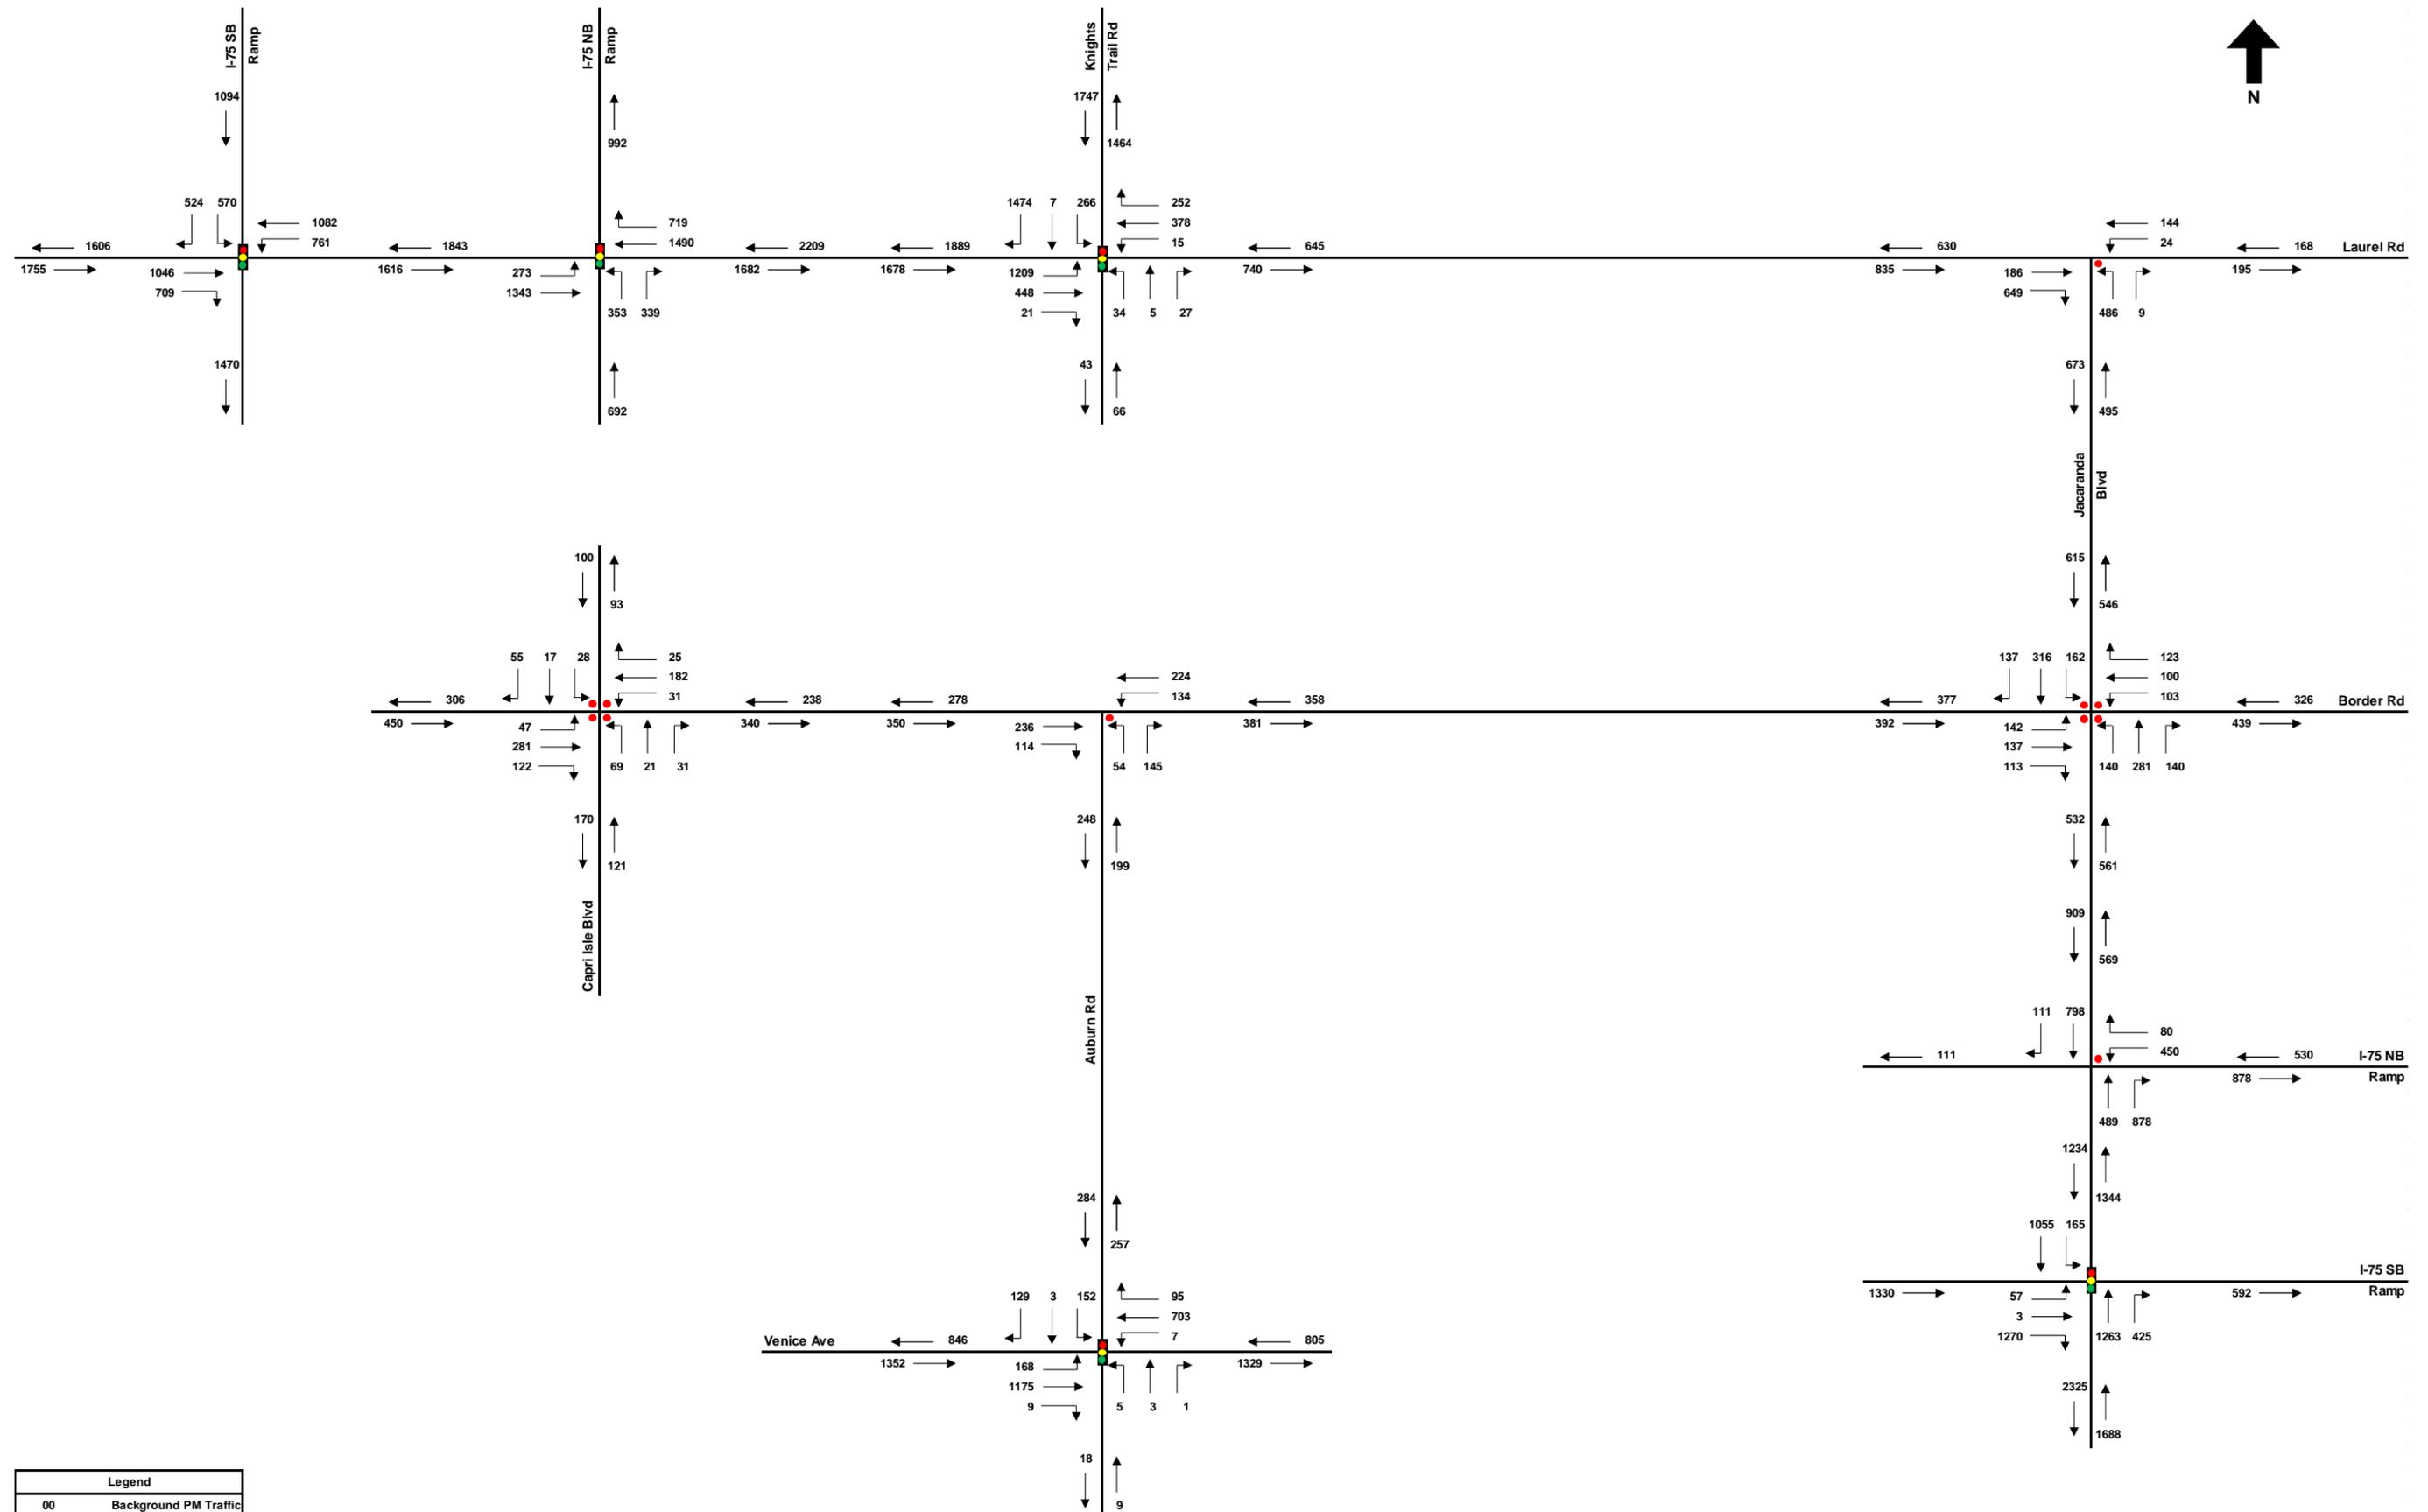

Figure 5: 2025 PM Peak-Hour Background Traffic

## ROADWAY ANALYSIS

Roadway segmentation and maximum service volumes were again taken from Sarasota County’s 2016 Generalized Level of Service Analysis Table. The results of the 2025 background traffic level-of-service analysis are summarized in **Table 6** and indicate that all segments within the study area are anticipated to continue to operate at acceptable level-of-service standards except for Laurel Road from the I-75 SB Ramps to the project site. The failure on Laurel Road is due to the large amount of background growth, the majority of which is vested traffic.

**Table 6: 2025 Background Traffic Segment Conditions**

Road Name and Segment	Adopted LOS			Existing Traffic	Bkgd Growth	Vested Traffic <sup>1</sup>									2025 Bkgd Traffic	Exceeds LOS?
	LOS Standard	Number of Lanes	Service Volume			SJMR PUD	Toscana Isles	Plaza Venetia	Porto fino	Woods at Venice	VICA	Laurel Lakes	Murphy Oaks	Laurel Rd Storage

1. Volumes obtained from individual movements at the intersections; see Appendix C for additional detail.

## INTERSECTION ANALYSIS

The intersection analysis was again performed using Trafficware’s Synchro 10 Software. The 2025 background traffic analysis used the same geometry as the existing conditions, except for the identified vested project improvements. Signal timing adjustments were also made along the Laurel Road corridor in conjunction with the geometric improvements. The three coordinated intersections had their cycle lengths increased from 110 seconds to 160 seconds.

The results of the Synchro intersection analysis are summarized in **Table 7** and indicate that all the intersection with the exception of the Capri Isles Boulevard/Edmondson Road and Auburn Road/Border Road intersections are anticipated to operate at unacceptable level-of-service standards with at least one movement operating at level-of-service E.

**Table 7: 2025 Background Traffic Intersection Conditions**

Intersection	Type	Overall Intersection LOS		Delay (sec/veh)	Max v/c Ratio	Approach LOS			
		Standard	Bkgd			EB	WB	NB	SB
I-75 SB Ramp & Laurel Rd	Signalized	D	D	54.9	<b>1.07</b>	<b>F</b>	B		<b>F</b>

Auburn Rd & E Venice Ave	Signalized	D	B	16.5	0.78	B	B	<b>E</b>	<b>E</b>

1. Delay shown for the worst approach.
2. No left-turn movement for approach.
3. Left-turn movement level-of-service.

The intersection volume tables are provided in Appendix C. The 2025 background traffic Synchro intersection worksheets are provided in Appendix F, and electronic versions of the files are attached on the accompanying DVD.

### IMPROVED BACKGROUND TRAFFIC ANALYSIS

The large amount of background traffic creates generalized arterial deficiencies on Laurel Road between the I-75 SB Ramps and the project site and intersection deficiencies at eight of the study area intersections causing them to operate at an unacceptable level-of-service. The failures on Laurel Road and at the eight study area intersections are preexisting conditions and not caused by the addition of this project’s traffic.

Chapter 2011-139, Laws of Florida; and Chapter 163.3180 of the Florida Statutes as amended by HB 319, exempt developers from contributing proportionate-share monies to correct preexisting transportation deficiencies. Because the identified failures are preexisting conditions and not caused by the addition of this project’s traffic, improvements to correct the deficiencies can be considered in place. The improvements needed to correct the preexisting deficiencies are:

#### I-75 SB Ramp/Laurel Road Intersection

- Construct a second southbound left-turn lane to accommodate the projected 570 vehicles.

#### Knights Trail Road/Laurel Road Intersection

- Construct an eastbound to northbound left turn flyover for the projected 1209 vehicles and remove the westbound left turn protected phase.

#### Jacaranda Boulevard/Laurel Road Intersection

- Signalize and add an eastbound right-turn lane to accommodate the projected 649 vehicles.

#### Jacaranda Boulevard/Border Road Intersection

- Signalize and restripe the southbound approach from a shared left-turn/through lane and exclusive right-turn lane to an exclusive left-turn lane and a shared through/right-turn lane so that left-turn traffic will not block through traffic on green.

#### Jacaranda Boulevard/I-75 NB Ramp Intersection

- Signalize

#### Jacaranda Boulevard/I-75 SB Ramp Intersection

- Add a southbound left-turn protected plus permitted phase.
- Convert the dual eastbound right turn lanes to a free-flow movement with an add lane (becoming the southbound right turn lane at Commercial Court intersection).

#### Auburn Road/Venice Avenue Intersection

- Remove the split phase operations for the northbound/southbound approaches.

The improvements to the intersections are anticipated to allow the arterial segment of Laurel Road to operate at acceptable level-of-service standards without widening Laurel Road from four to six lanes. **Table 8** shows results of the detailed Synchro arterial analysis by direction accounting for the improvements to the intersections and **Table 9** shows the results of the improved intersection analysis for the background traffic conditions. The tables demonstrate that the identified improvements will correct the preexisting deficiencies and allow the arterial and intersections to operate at acceptable level-of-service standards with the exception of the I-75/Laurel Road interchange and Knights Trail Road/Laurel Road intersection.

At the I-75/Laurel Road interchange, the eastbound through (I-75 SB Ramp), southbound left, southbound right, and northbound left movements still operate at level-of-service E. However, all the movements have volume to capacity (v/c) ratios less than 1.0 indicating capacity still exists. In order to further improve the level-of-service, the interchange would need to be converted to a diverging diamond interchange (DDI). Based on the peak-season peak-hour operating conditions, a major reconstruction of the interchange is not warranted.

At the Knights Trail Road/Laurel Road intersection, the northbound left and northbound through/right movements still operate at level-of-service E. However, both movements have a v/c ratio less than 1.0 indicating capacity still exists. There are only 34 peak-season peak-hour northbound left movements and 32 peak-season peak-hour northbound through/right movements. Additional improvements are not required to mitigate the low northbound volumes.

**Table 8: Improved 2025 Background Traffic Arterial Conditions**

Arterial	Direction	Adopted LOS	Number of Lanes	Arterial Speed (mph)	Arterial LOS
<b>Laurel Road</b>					
I-75 SB to I-75 NB	EB	D	2	33.1	B
	WB		2	31.5	B
I-75 NB to Knights Trail Rd	EB	D	2	18.5	D
	WB		2	22.0	C
Knights Trail Rd to Jacaranda Blvd	EB	D	1	41.1	A
	WB		1	31.0	B

**Table 9: Improved 2025 Background Traffic Intersection Conditions**

Intersection	Type	Overall Intersection LOS		Delay (sec/veh)	Max v/c Ratio	Approach LOS			
		Standard	Bkgd			EB	WB	NB	SB
I-75 SB Ramp & Laurel Rd	Signalized	D	D	44.2	0.96	E	C		E
I-75 NB Ramps & Laurel Rd	Signalized	D	C	29.8	0.84	A	D	E

Auburn Rd & E Venice Ave	Signalized	D	B	18.9	0.59	B	B	D	D

The intersection volume tables are provided in Appendix C. The 2025 improved background traffic Synchro arterial and intersection worksheets are provided in Appendix G and electronic versions of the files are attached on the accompanying DVD.

## 2025 Total Traffic Conditions

The total traffic conditions were analyzed for 2025. The total traffic conditions consist of the existing PM peak-hour peak-season traffic volumes, annual background growth, vested traffic from approved developments, and project traffic. The 2025 total traffic PM peak-hour peak-season total traffic volumes are shown in **Figure 6**.

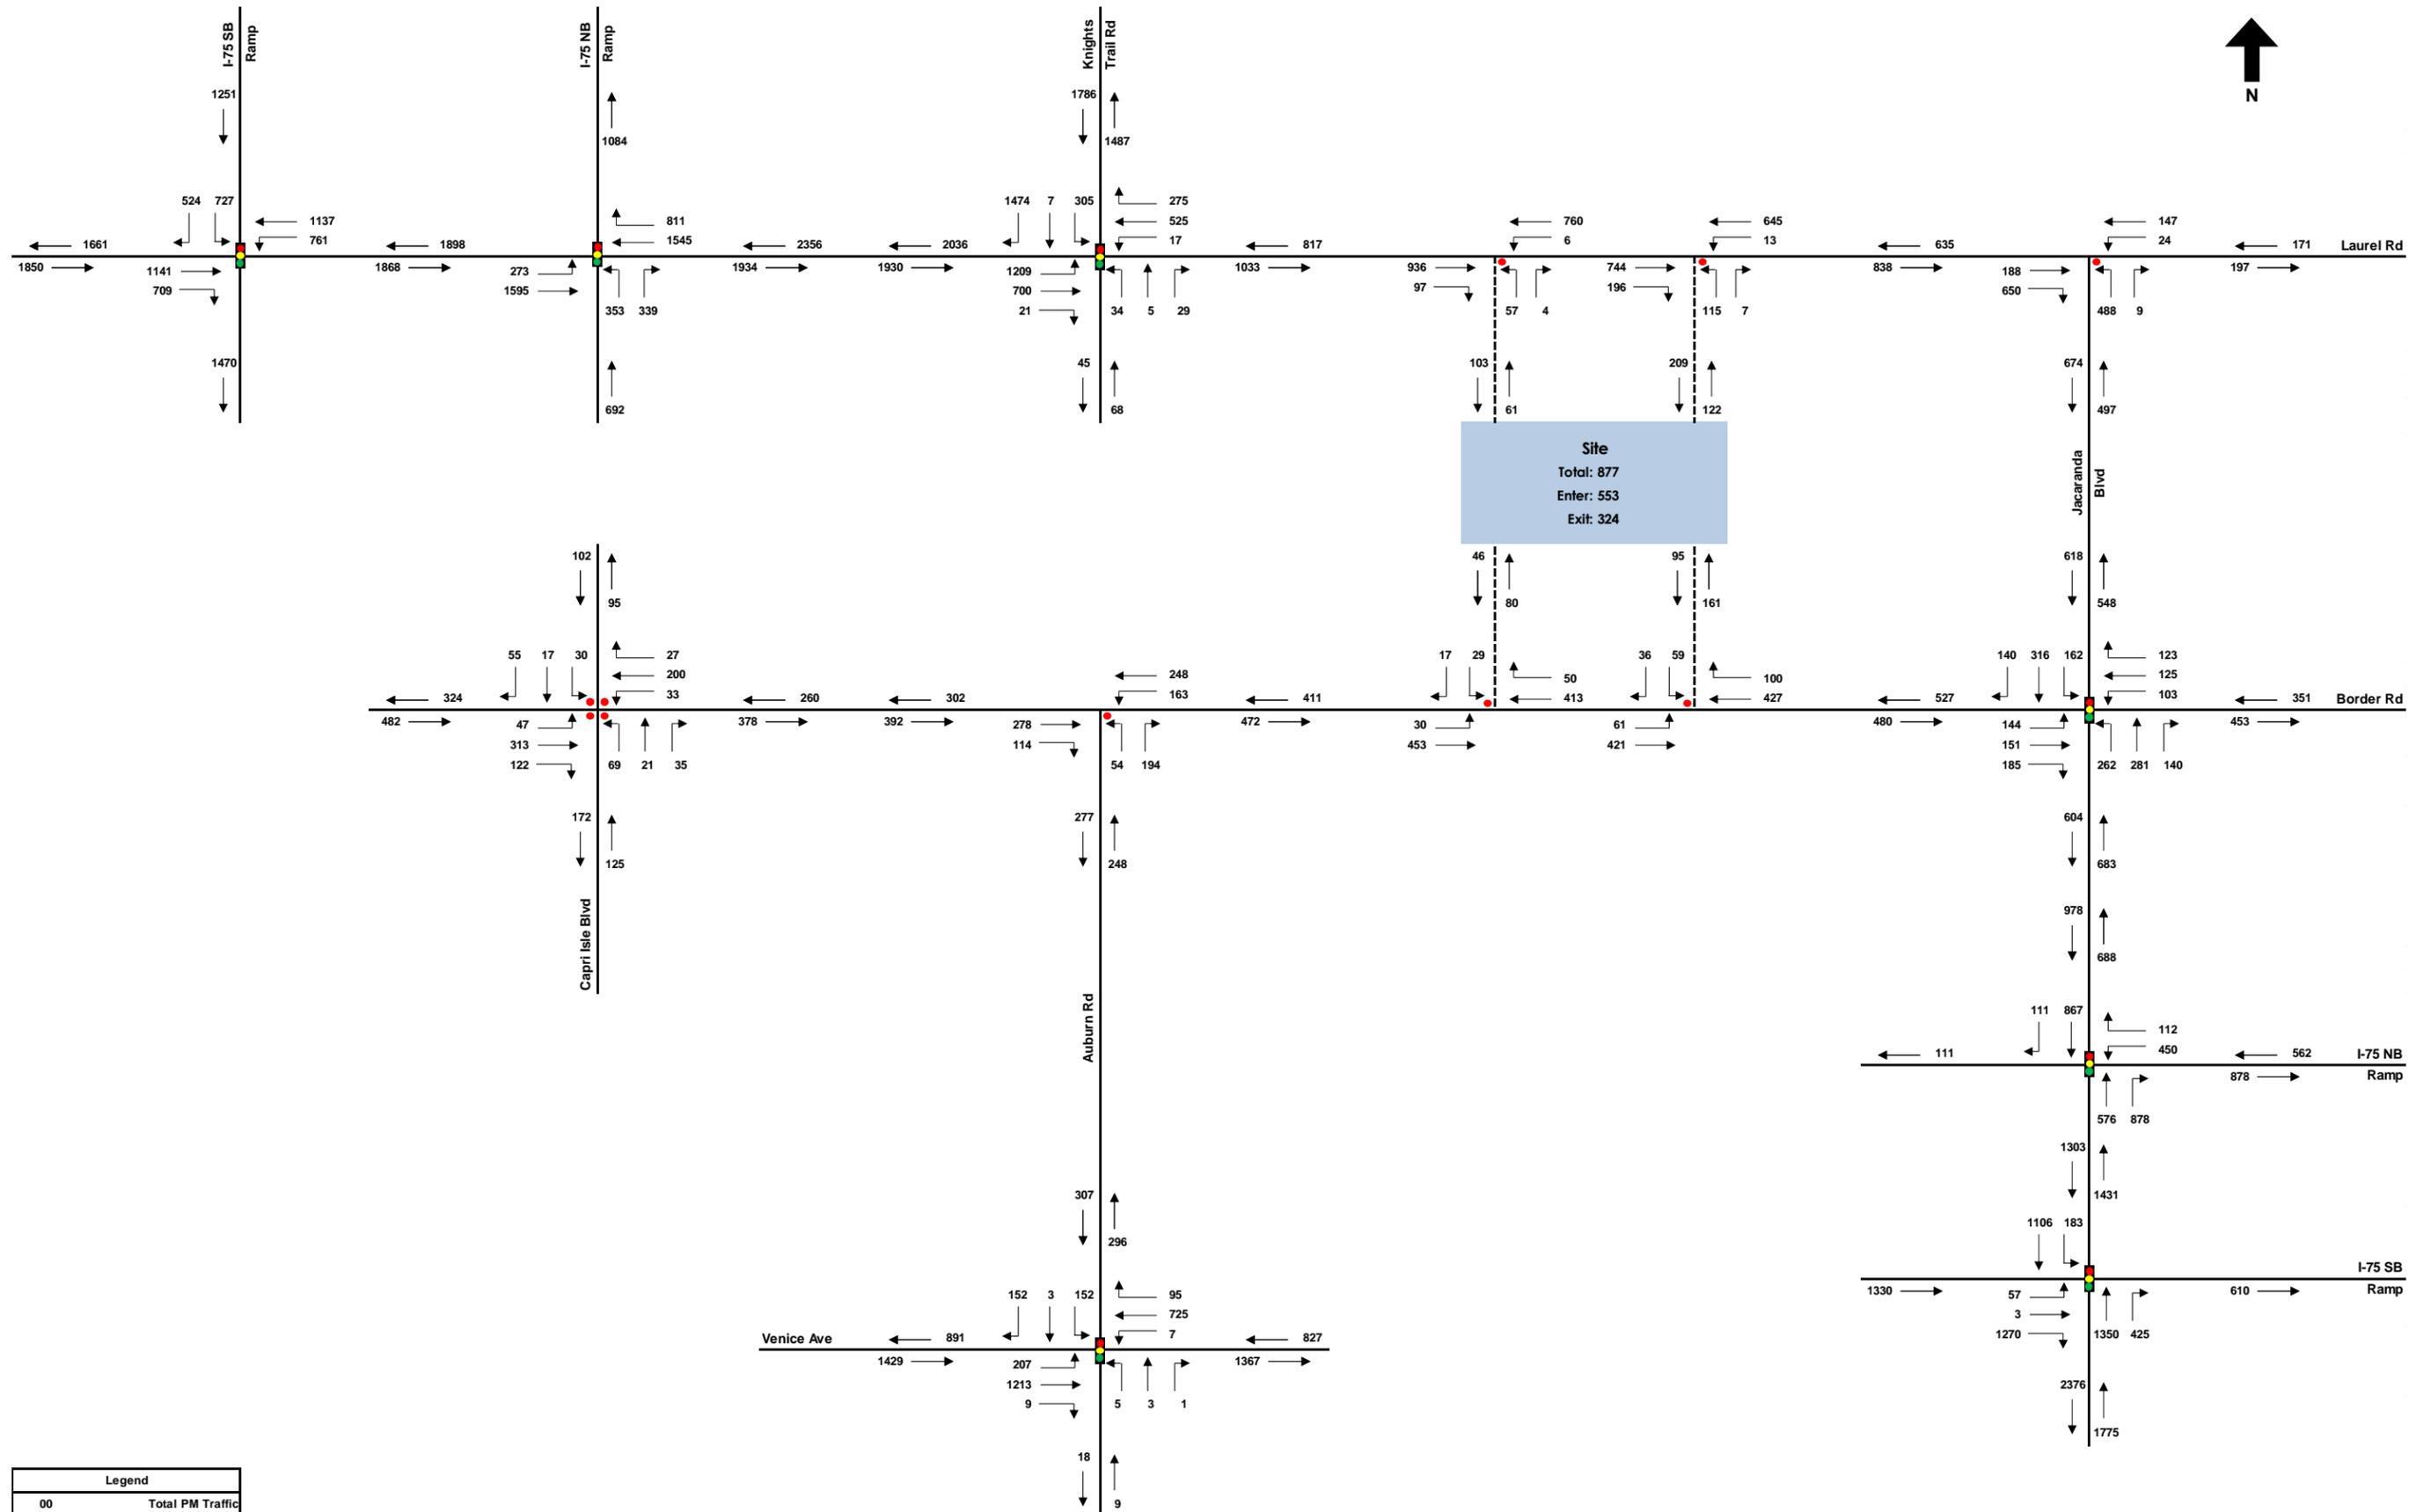

Figure 6: 2025 PM Peak-Hour Total Traffic

## ROADWAY ANALYSIS

Roadway segmentation and maximum service volumes were again taken from Sarasota County's 2016 Generalized Level of Service Analysis Table. The results of the 2025 total traffic level-of-service analysis are summarized in **Table 10** and indicate that all segments in the study area are anticipated to operate at acceptable level-of-service standards with the exception of Laurel Road from the I-75 SB Ramps to the project site. Because Laurel Road exceeds its generalized adopted level-of-service standard (as identified in the background traffic conditions), a detailed analysis of the arterial was performed using the Synchro Software. Based on the detailed Synchro analysis, the segments will operate at acceptable level-of-service standards. The 2025 traffic conditions Synchro analysis is attached in Appendix H. No roadway improvements are required in conjunction with this project.

**Table 10: 2025 Total Traffic Segment Conditions**

Road Name and Segment	Adopted LOS			Bkgd Traffic	Project Traffic	2025 Total Traffic	Exceeds LOS?
	LOS Standard	Number of Lanes	Service Volume				
<b>Auburn Road</b>							
Border Rd to Venice Ave	D	2	1,197	496	70	566	No
<b>Border Road</b>							
Auburn Rd to Site	D	2	1,264	753	145	898	No
Site to Jacaranda Blvd	D	2	1,264	757	238	995	No
<b>Edmondson Road</b>							
Capri Isles Blvd to Auburn Rd	D	2	931	604	63	667	No
<b>Jacaranda Boulevard</b>							
Border Rd to I-75 NB	D	2	1,510	1,288	191	1,479	No
I-75 NB to I-75 SB	D	4	3,401	2,578	156	2,734	No
<b>Laurel Road</b>							
I-75 SB to I-75 NB	D	4	3,401	3,461	307	3,768	No <sup>1</sup>
I-75 NB to Knights Trail Rd	D	4	3,401	3,732	399	4,131	No <sup>2</sup>
Knights Trail Rd to Site	D	2	1,440	1,474	465	1,939	No <sup>3</sup>
Site to Jacaranda Blvd	D	2	1,440	1,376	30	1,406	No

1. The Synchro analysis indicates that the arterial is operating at level-of-service B with an average travel speed of 31.8 mph for the eastbound direction and operating at level-of-service B with an average travel speed of 30.9 mph for the westbound direction.
2. The Synchro analysis indicates that the arterial is operating at level-of-service D with an average travel speed of 18.3 mph for the eastbound direction and operating at level-of-service D with an average travel speed of 21.7 mph for the westbound direction.
3. The Synchro analysis indicates that the arterial is operating at level-of-service A with an average travel speed of 41.0 mph for the eastbound direction and operating at level-of-service B with an average travel speed of 31.3 mph for the westbound direction.

## INTERSECTION ANALYSIS

The intersection analysis was again performed using Trafficware’s Synchro 10 Software. The 2025 total traffic intersection analysis used the same geometry as the improved background traffic analysis. The geometric improvements identified at the study area intersections needed to correct the background traffic deficiencies were assumed to be in place. The results of the Synchro intersection analysis are summarized in **Table 11** and indicate all intersections are anticipated to continue to operate at acceptable level-of-service standards with the addition of project traffic with the exception of the I-75/Laurel Road interchange and Knights Trail Road/Laurel Road intersection. At those locations, the total traffic conditions are the same as the background traffic conditions with improvements. Given that the v/c ratios are less than 1.0, no additional improvements are required.

**Table 11: 2025 Total Traffic Intersection Conditions**

Intersection	Type	Overall Intersection LOS		Delay (sec/veh)	Max v/c Ratio	Approach LOS			
		Standard	Total			EB	WB	NB	SB
I-75 SB Ramps & Laurel Rd	Signalized	D	D	44.5	0.97	E	B		E
I-75 NB Ramps & Laurel Rd	Signalized	D	C	28.4	0.84	A	D	E

Jacaranda Blvd & Laurel Rd	Signalized	D	B	15.4	0.85	B	A	C	
Capri Isles Blvd & Edmondson Rd	AWSC	D	B	14.2	0.67	C	B	B	B
Auburn Rd & Border Rd	TWSC	D	n/a	27.8 <sup>1</sup>	0.66	-- <sup>2</sup>	A <sup>3</sup>	D	
Jacaranda Blvd & Border Rd	Signalized	D	D	42.6	0.91	D	C	D	D
Jacaranda Blvd & I-75 NB Ramps	Signalized	D	C	28.3	0.91		D	C	B
Jacaranda Blvd & I-75 SB Ramps	Signalized	D	A	8.8	0.84	A		B	A
Auburn Rd & E Venice Ave	Signalized	D	B	19.3	0.59	B	B	D	D

1. Delay shown for the worst approach.
2. No left-turn movement for approach.
3. Left-turn movement level-of-service.

The intersection volume tables are provided in Appendix C. The 2025 total traffic Synchro intersection worksheets are provided in Appendix H and electronic versions of the files are attached on the accompanying DVD.

## SITE ACCESS ANALYSIS

The site access analysis evaluated the need for right- and left-turn lanes at the site access points as well as the level-of-service for turn lanes into the site and the v/c ratio for the driveway approaches. The development will utilize four new connections, two to Laurel Road and two to Border Road. **Figure 6** shows the project traffic at the proposed access points.

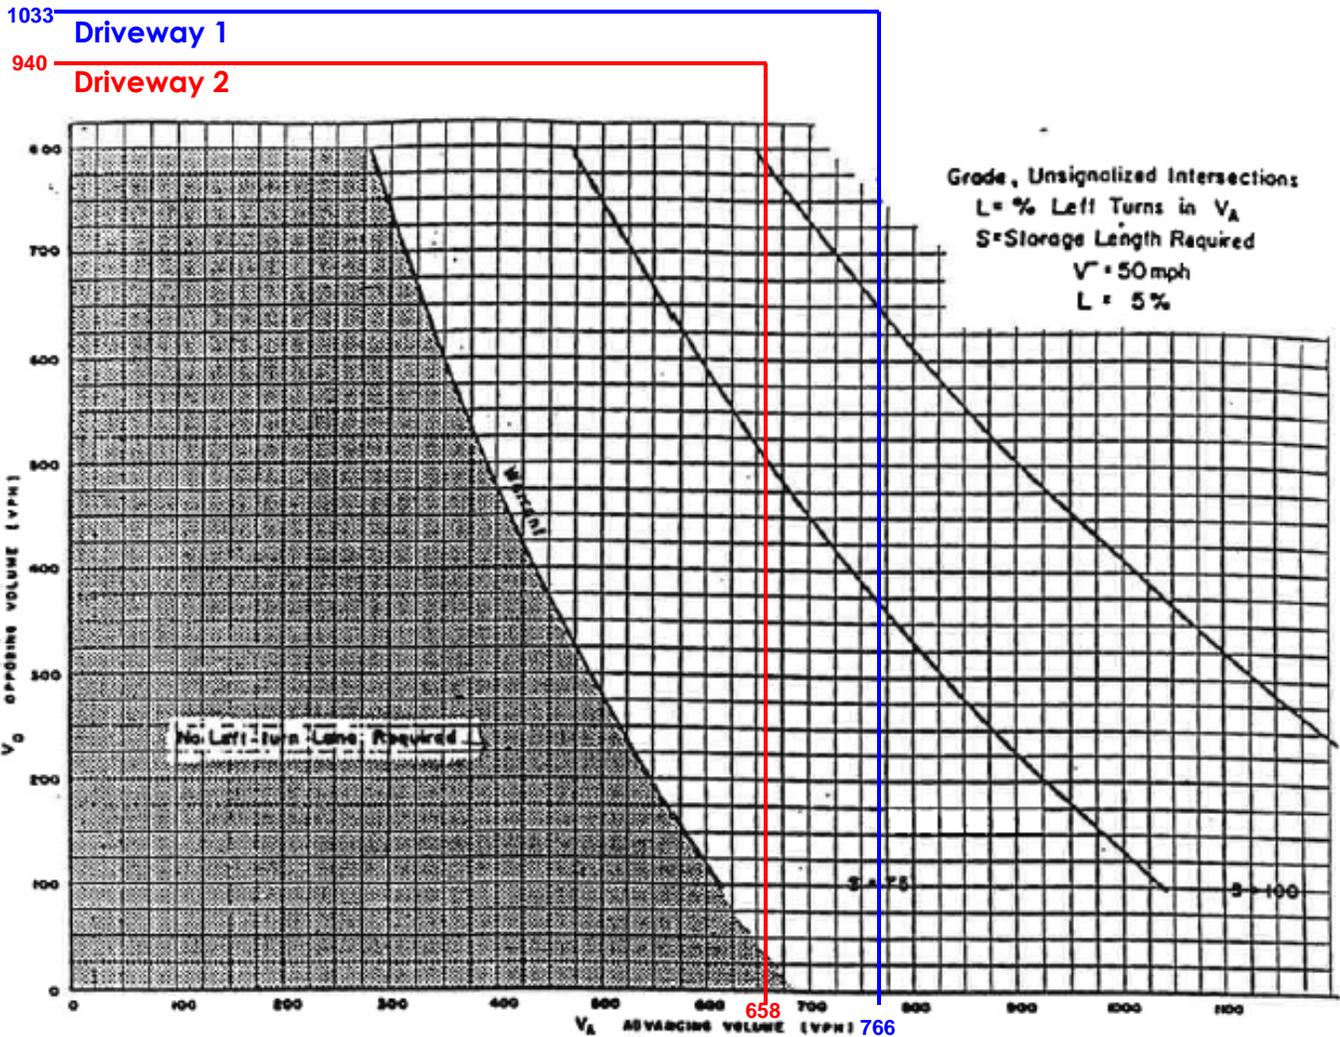

Driveway 1 and Driveway 2 at Laurel Road Site Access Connections

The right-turn lane warrant was performed based on the FDOT *Driveway Information Guide*. The report identifies the threshold of right turns requiring an exclusive turn lane for speeds above and below 45 mph. The posted speed on Laurel Road is 45 mph. For speeds 45 mph or less, a maximum of 80 right turns per hour on two-lane roads is allowed. During the PM peak-hour it is estimated that 97 vehicles will make an eastbound right from Laurel Road at Driveway 1 and 196 vehicles will make an eastbound right from Laurel Road at Driveway 2.

Given that there are more than 80 right-turning vehicles, the right-turn-lane warrant threshold volume is satisfied at both site access points. FDOT *Standard Index 301* specifies a deceleration length of 185 feet for a design speed of 45 mph (assumed the design speed was equal to the posted speed due to the presence of raised curb and gutter along the north side of the road). Therefore, a 185-foot eastbound right-turn lane needs to be constructed at both project driveways on Laurel Road in conjunction with this project.

The need for westbound left-turn lanes at Driveway 1 and Driveway 2 was based on the M.D. Harmelink Study and the National Cooperative Highway Research Program (NCHRP) Report 279. The left-turn lane warrant analysis is summarized below:

	<u>Driveway 1</u>	<u>Driveway 2</u>
Advancing Volume (Va) =	766 vph	658 vph
Opposing Volume (Vo) =	1033 vph	940 vph
Left-turn Volume =	6 vph	13 vph
Laurel Road Speed Limit =	45 mph	45 mph
Percent Left Turns =	.8% ≈ 5%	2% ≈ 5%

**Figure 7: Driveway 1 and Driveway 2 at Laurel Road Left-Turn Lane Warrant**

Based on the trip generation and assignment, both Driveway 1 and Driveway 2 warrant a left-turn lane. FDOT *Standard Index 301* specifies a deceleration length of 185 feet for a speed of 45 mph. The required unsignalized queue length for the left-turn lane was calculated using procedures outlined in the AASHTO *Green Book*. The AASHTO *Green Book* specifies that at a minimum, queue storage for at least two vehicles (50 feet) be provided. Both the six westbound left-turning vehicles at Driveway 1 and 13 westbound left-turning vehicles at Driveway 2 will require 50 feet of queue; therefore, the left-turn lanes should be 235 feet (185 + 50). The queue length calculation is shown below:

**Driveway 1 WB Left-turn Lane Queue Length:**

$$6 \frac{veh}{hr} \left( \frac{1 hr}{60 min} \right) \left( \frac{2 min}{veh} \right) \left( \frac{25 ft}{veh} \right) \approx 5 ft = 50 ft$$

**Driveway 2 WB Left-turn Lane Queue Length:**

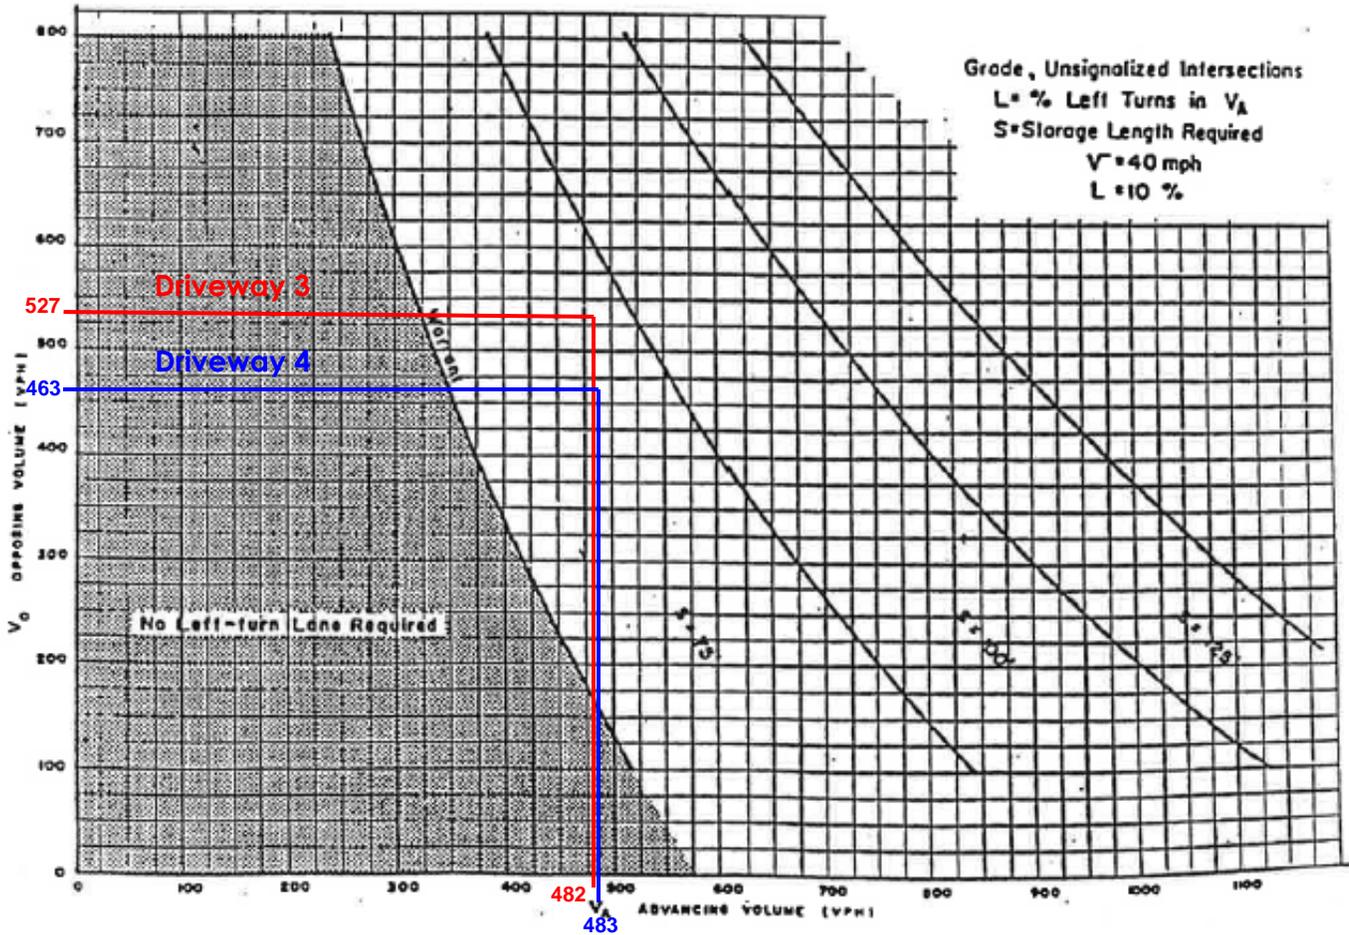

$$13 \frac{veh}{hr} \left( \frac{1 hr}{60 min} \right) \left( \frac{2 min}{veh} \right) \left( \frac{25 ft}{veh} \right) \approx 11 ft = 50 ft$$

Driveway 3 and Driveway 4 at Border Road Site Access Connections

The right-turn lane warrant was performed based on the FDOT *Driveway Information Guide*. The report identifies the threshold of right turns requiring an exclusive turn lane for speeds above and below 45 mph. The posted speed on Border Road is 40 mph. For speeds 45 mph or less, a maximum of 80 right turns per hour on two-lane roads is allowed. During the PM peak-hour it is estimated that 100 vehicles will make a westbound right from Border Road at Driveway 3 and 50 vehicles will make a westbound right from Border Road at Driveway 4. Given that there are more than 80 right-turning vehicles at Driveway 3, the right-turn-lane warrant threshold volume is satisfied at that site access point. A right-turn-lane is not warranted at Driveway 4. FDOT *Standard Index 301* specifies a deceleration length of 185 feet for a design speed of 45 mph (assumed 40 mph posted speed plus 5 mph). Therefore, a 185-foot westbound right-turn lane needs to be constructed in conjunction with this project at Driveway 3.

The need for an eastbound left-turn lane at Driveway 3 and Driveway 4 was based on the M.D. Harmelink Study and the National Cooperative Highway Research Program (NCHRP) Report 279. The left-turn lane warrant analysis is summarized below:

	<u>Driveway 3</u>	<u>Driveway 4</u>
Advancing Volume (Va) =	482 vph	483 vph
Opposing Volume (Vo) =	527 vph	463 vph
Left-turn Volume =	61 vph	30 vph
Laurel Road Speed Limit =	40 mph	40 mph
Percent Left Turns =	12.7% ≈ 10%	6.2% ≈ 10%

**Figure 8: Driveway 3 and Driveway 4 at Border Road Left-Turn Lane Warrant**

Based on the trip generation and assignment, both Driveway 3 and Driveway 4 warrant a left-turn lane. FDOT *Standard Index 301* specifies a deceleration length of 185 feet for a design speed of 45 mph. The required unsignalized queue length for the left-turn lane was calculated using procedures outlined in the *AASHTO Green Book*. The *AASHTO Green Book* specifies that at a minimum, queue storage for at least two vehicles (50 feet) be provided. Both the 61 eastbound left-turning vehicles at Driveway 3 and 30 eastbound left-turning vehicles at Driveway 4 will require 50 feet of queue; therefore, the left-turn lanes should be 235 feet (185 + 50). The queue length calculation is shown below:

**Driveway 3 EB Left-turn Lane Queue Length:**

$$61 \frac{veh}{hr} \left( \frac{1 hr}{60 min} \right) \left( \frac{2 min}{veh} \right) \left( \frac{25 ft}{veh} \right) \approx 25 ft = 50 ft$$

**Driveway 4 EB Left-turn Lane Queue Length:**

$$30 \frac{veh}{hr} \left( \frac{1 hr}{60 min} \right) \left( \frac{2 min}{veh} \right) \left( \frac{25 ft}{veh} \right) \approx 51 ft = 50 ft$$

### Level-of-Service Analysis

A Synchro analysis was performed to ensure that the turn lanes into the site operate at acceptable level-of-service. The City of Venice has not adopted level-of-service standards for driveways. The driveway approaches were checked to ensure that the v/c ratio did not exceed 1.0. **Table 12** demonstrates that the turn lanes into the site will operate at acceptable level-of-service standards and the driveway approaches will have v/c ratios less than 1.0.

**Table 12: Site Access Level-of-Service Analysis**

Intersection	Type	Delay (sec/veh) <sup>1</sup>	Max v/c Ratio	Left Turn Queue (ft) <sup>2</sup>	Approach LOS			
					EB	WB	NB	SB
Driveway 1 & Laurel Rd	TWSC	119.1	0.75	0	-- <sup>3</sup>	B <sup>4</sup>	F	
Driveway 2 & Laurel Rd	TWSC	131.9	0.97	3	-- <sup>3</sup>	B <sup>4</sup>	F	
Driveway 3 & Border Rd	TWSC	20.5	0.27	5	A <sup>4</sup>	-- <sup>3</sup>		C
Driveway 4 & Border Rd	TWSC	17.2	0.12	3	A <sup>4</sup>	-- <sup>3</sup>		C

1. Delay shown for the project stop-controlled approach.
2. Queue for the inbound left-turn movement to the site.
3. No left-turn movement for approach.
4. Left-turn movement level-of-service.

The site access analysis Synchro intersection worksheets are provided in Appendix I and electronic versions of the files are attached on the accompanying DVD.

## Conclusion

The GCCF Property consists of a maximum of 1,300 dwelling units; 550 single-family detached dwelling units and 750 single-family attached dwelling units and is estimated to generate 877 PM peak-hour trip ends (553 entering; 324 exiting). The analysis evaluated a build-out year of 2025. A transportation concurrency analysis and site access analysis were both performed for the project for the PM peak-hour.

All study area roadway segments are currently operating at acceptable level-of-service standards. Six of the 10 study area intersections are currently operating at acceptable level-of-service standards. Several deficiencies were identified in the study area for the background traffic conditions in 2025. Laurel Road between the I-75 SB Ramp and the project site is anticipated to exceed the City of Venice's generalized adopted level-of-service standards; however, a detailed arterial analysis (along with the improvements to the corresponding intersections) demonstrates that widening is not required. In addition, eight intersections were identified as having at least one movement where the level-of-service D threshold was not met. The improvements needed to correct the preexisting deficiencies at each intersection are:

### I-75 SB Ramps/Laurel Road Intersection

- Increase the cycle length from 110 second to 160 seconds.
- Construct a second southbound left-turn lane to accommodate the projected 570 vehicles.

### I-75 NB Ramp/Laurel Road Intersection

- Increase the cycle length from 110 second to 160 seconds.

### Knights Trail Road/Laurel Road Intersection

- Increase the cycle length from 110 second to 160 seconds.
- Construct an eastbound to northbound left turn flyover for the projected 1209 vehicles and remove the westbound left turn protected phase.

### Jacaranda Boulevard/Laurel Road Intersection

- Signalize and add an eastbound right-turn lane to accommodate the projected 649 vehicles.

### Jacaranda Boulevard/Border Road Intersection

- Signalize and restripe the southbound approach from a shared left-turn/through lane and exclusive right-turn lane to an exclusive left-turn lane and a shared through/right-turn lane so that left-turn traffic will not block through traffic on green.

### Jacaranda Boulevard/I-75 NB Ramp Intersection

- Signalize

#### Jacaranda Boulevard/I-75 SB Ramp Intersection

- Add a southbound left-turn protected plus permitted phase.
- Convert the dual eastbound right turn lanes to a free-flow movement with an add lane (becoming the southbound right turn lane at Commercial Court intersection).

#### Auburn Road/Venice Avenue Intersection

- Remove the split phase operations for the northbound/southbound approaches.

Because the failures identified above are preexisting conditions and not caused by the addition of this project's traffic, improvements to correct the deficiencies can be considered in place. Once the aforementioned improvements are made, all intersections will operate at acceptable level-of-service standards. The addition of project traffic does not create any additional deficiencies in the study area.

The site access analysis evaluated the four proposed driveway connections to Laurel Road and Border Road. The need for right- and left-turn lanes as well as the operating conditions of the driveway approaches was evaluated. The following site access improvements are required in conjunction with this project. All turn lanes should be constructed in accordance with the *FDOT Plans Preparation Manual* and *Standard Index 301*.

#### Driveway 1/Laurel Road

- Construct a 185-foot eastbound right-turn lane
- Construct a 235-foot westbound left-turn lane

#### Driveway 2/Laurel Road

- Construct a 185-foot eastbound right-turn lane
- Construct a 235-foot westbound left-turn lane

#### Driveway 3/Border Road

- Construct a 235-foot eastbound left-turn lane
- Construct a 185-foot westbound right-turn lane

#### Driveway 4/Border Road

- Construct a 235-foot eastbound left-turn lane

**Subject:** RE: GCCF Methodology

Matt,

The Percent Project Traffic in Table 2 was not updated for the updated distribution along Venice Ave between Auburn & Jacaranda.

Also, three segments have different minimum adopted service volumes than what is indicated in Sarasota County's 2016 Generalized LOS Table.

1. Border Rd from Jacaranda to Jackson
2. Jacaranda Blvd from Border to I-75NB
3. Laurel Rd, east of Knights Trail Rd

Everything else looks great.

Thanks,  
Aimee

**Reference: GCCF Property  
 Transportation Methodology Statement**

Dear Mr. Shrum:

This letter serves to summarize the Transportation Methodology for the subject project for your approval. The proposed development is located east of I-75 between Border Road and Laurel Road in Venice, Florida. The petitioner proposes to construct a maximum of 1,300 dwelling units; 550 single-family detached dwelling units and 750 single-family attached dwelling units. The development will have three access points, two to Laurel Road and one to Border Road. The build-out year for the development is 2025. The analysis is for transportation concurrency approval from the City of Venice. The following is a summary of the methodology:

**Trip Generation**

The transportation analysis will be based on the PM peak-hour. Traffic volumes generated by the proposed development will be estimated using the Institute of Transportation Engineers (ITE), *Trip Generation – the 10<sup>th</sup> Edition (2017)*. Land Use Code 210 (Single-Family Detached Housing) and Land Use Code 220 (Multifamily Housing Low-Rise) will be used to estimate the trip generation potential. No Internal Capture or Pass-by Capture trips will be used in the analysis. The PM peak-hour trip generation is summarized in Table 1.

**Table 1: PM Peak-Hour Trip Generation**

ITE Land Use Category	Variable	Size	PM Peak Trip Rate/ Equation	PM Enter Split	PM Exit Split	PM Peak Total Trips		
						Total	Enter	Exit
Single-Family Detached Housing - 210	Per Unit	550	$\ln(T) = 0.96\ln(x) + 0.20$	63%	37%	522	329	193
Multifamily Housing (Low-Rise) - 220	Per Unit	750	$\ln(T) = 0.89\ln(x) - 0.02$	63%	37%	355	224	131
<b>TOTAL</b>						<b>877</b>	<b>553</b>	<b>324</b>

September 12, 2018  
Jeff Shrum, AICP  
Page 2 of 6

**Reference: GCCF Property  
Transportation Methodology Statement**

**Trip Distribution**

The FDOT D1 Districtwide 2018 Existing plus Committed travel demand model will be used to distribute project traffic from the site. Similar to the manual adjustments requested by the City of Venice during previous transportation methodologies, project traffic will be manually adjusted to shift a portion of the north-south project traffic assigned to Auburn Road to Jacaranda Boulevard, a more likely north-south route. The distribution of project traffic from the site is shown in the attached Figure.

**Study Area**

The study area will consist of arterial and collector roads that:

- Project traffic equals or exceeds 4.5 percent of the adopted two-way peak-hour service volume (LOS D), as specified by Sarasota County's 2016 Generalized Level of Service Table, for all applicable county and state roads.
- Any road segment to which the development has a direct access or which the development accesses via local and private roads.

It is anticipated that 10 regulated roadway segments will exceed 4.5 percent of the adopted two-way peak-hour service volume or have direct access and will be included in the study area. A preliminary study area determination is shown in Table 2 and shown in the attached graphic.

**Reference: GCCF Property  
 Transportation Methodology Statement**

**Table 2: Study Area Determination**

Road Name and Segment	Adopted LOS			Percent Project Traffic	New Project Traffic		Significant Impact? (>4.5%)	Direct Access?
	LOS Standard	Number of Lanes	Service Volume		Trips	% Impact		
<b>Auburn Road</b>								
Border Rd to Venice Ave	D	2	1,197	8.0%	70	5.8%	Yes	No
<b>Border Road</b>								
Auburn Rd to Site	D	2	1,264	16.5%	145	11.5%	Yes	No
Site to Jacaranda Blvd	D	2	1,264	27.1%	238	18.8%	Yes	No
Jacaranda Blvd to Jackson Rd	D	2	1,057	4.2%	37	3.5%	No	No
<b>Capri Isles Boulevard</b>

Venice to Center	D	4	3,401	7.1%	62	1.8%	No	No
<b>Knights Trail</b>								
Laurel Rd to Rustic Rd	D	2	1,440	7.1%	62	4.3%	No	No
<b>Laurel Road</b>								
Pinebrook Rd to I-75 SB	D	4	3,401	17.1%	150	4.4%	No	No
I-75 SB to I-75 NB	D	4	3,401	30.3%	307	9.0%	Yes	No
I-75 NB to Knights Trail Rd	D	4	3,401	45.5%	399	11.7%	Yes	No
Knights Trail Rd to Site	D	2	1,440	53.0%	465	32.3%	Yes	Yes
Site to Jacaranda Blvd	D	2	1,440	3.4%	30	2.1%	No	Yes
Jacaranda Blvd to Citadella Dr	D	2	1,440	0.5%	4	0.3%	No	No
<b>Venice Ave</b>								
Capri Isles Blvd to Auburn	D	4	3,222	12.4%	109	3.4%	No	No
Auburn to Jacaranda	D	4	3,222	6.7%	59	1.8%	No	No
Jacaranda to Jackson	D	2	1,120	0.9%	8	0.7%	No	No

In addition, intersections at the termini of study area roadway segments as well as the project access points will be evaluated. The 10 off-site intersections that will be studied are listed below. The study area roadway segments and intersections are shown in the attached graphic.

2. I-75 NB/Laurel Rd
3. Knights Trail/Laurel Rd
4. Jacaranda Blvd/Laurel Rd
5. Capri Isles Blvd/Edmondson Rd
6. Auburn Rd/Border Rd
7. Jacaranda Blvd/Border Rd
8. Jacaranda Blvd/I-75 NB
9. Jacaranda Blvd/I-75 SB
10. Auburn Rd/E Venice Ave

**Scheduled/Planned Improvements**

Improvements scheduled for construction in the current Sarasota County and City of Venice Capital Improvement Programs (CIPs) or the FDOT Five Year Work Program will be included in the analysis. Improvements scheduled in the first three years will be assumed to be in place for the future traffic conditions. In addition, any improvements that will be completed with the vested projects will be included for the future traffic conditions as well.

**Existing and Future Traffic**

1. Existing Traffic:

Will be based on PM peak-hour turning movement counts collected at the study area intersections. The intersection counts will be adjusted to peak-season conditions based upon FDOT's peak-season correction factors.

2. Future Traffic (Non Project):

Annual Average Daily Traffic (AADT) volumes obtained from the Sarasota County Generalized Level of Service Tables for roadway segments in the study area indicates a historical annual growth rate of 4.29% for the last five years and a negative growth rate for the last ten years. The historical growth rate is shown in Table 3. It is proposed that a 2.0% annual growth rate be used to forecast future background traffic. In addition to the background growth, any vested traffic within the study area will be provided by the City of Venice. It is anticipated that at a minimum the following projects (unconstructed portions only) will be included as part of the background traffic:

- SJMR PUD
- Toscana Isles
- Plaza Venezia
- Portofino
- Woods of Venice
- Milano PUD
  - Villages of Milano (VICA)
  - Laurel Lakes
- Murphy Oaks
- Laurel Rd Storage Facility

**Reference: GCCF Property  
 Transportation Methodology Statement**

**Table 3: Historical Growth Rates**

Road Name and Segment	2006 AADT	2011 AADT	2016 AADT	5-YR Growth Rate	10-YR Growth Rate
<b>Auburn Road</b>					
Border Rd to Venice Ave	3,072	2,803	2,148	-5.18%	-3.51%
<b>Border Road</b>					
Auburn Rd to Jacaranda Blvd	--	2,124	2,741	5.23%	--
<b>Edmondson Road</b>					
Capri Isles Blvd to Auburn Rd	--	2,747	--	--	--
<b>Jacaranda Boulevard</b>					
Laurel Rd to Border Rd	--	--	3,371	--	--
Border Rd to I-75	--	2,193	4,845	17.18%	--
I-75 to Executive/Commercial	29,407	23,655	24,158	0.42%	-1.95%
<b>Laurel Road</b>					
Pinebrook Rd to I-75	17,352	11,269	19,261	11.32%	1.05%
I-75 to Jacaranda Blvd	--	13,227	15,027	2.58%	--
<b>TOTAL</b>	<b>49,831</b>	<b>55,271</b>	<b>68,180</b>	<b>4.29%</b>	<b>-0.89%</b>

**Analysis Scenarios**

The analysis will be undertaken for the PM Peak-Hour, and will include the following scenarios:

1. Existing traffic will be evaluated within the established study area (2018 conditions).
2. Existing traffic plus Future traffic will be evaluated for 2025.
3. Existing traffic plus Future traffic plus Project traffic will be evaluated for 2025.

**Proportionate Fair Share Analysis**

Consistent with Chapter 2011-139, Laws of Florida and Chapter 163.3180 of the Florida Statutes, as amended by HB 319, a proportionate fair share calculation will be provided for only those transportation deficiencies created by project traffic. If transportation improvements are needed to maintain the adopted level of service standards for Scenario 2 (Existing plus Future traffic), the necessary improvements will be identified and will be considered in place for Scenario 3 (Existing plus Future plus Project traffic). The project's proportionate fair share will be calculated only for any needed transportation improvements greater than those improvements required to remedy any deficiencies identified in Scenario 2. If a deficiency is created by project traffic in Scenario 3, the proportionate fair share will be calculated based upon the PM peak-hour trip generation and the following formula:

$$\text{Proportionate Fair Share} = \sigma \left[ \left( \frac{\text{Development Trips}_i}{\text{SV Increase}_i} \right) * \text{Cost}_i \right]$$

September 12, 2018  
Jeff Shrum, AICP  
Page 6 of 6

**Reference: GCCF Property  
Transportation Methodology Statement**

**Turn Lane Analysis**

A review of the turn lane requirements at the site access connections will be performed. Right turn lane warrants will be based on the FDOT *Driveway Information Guide*. The left turn lane warrants will be based on the M.D. Harmelink Study and the National Cooperative Highway Research Program (NCHRP) Report 279. If turn lanes are required, design requirements in the FDOT *Design Standards Index No. 301* will be used.

**Analysis Procedures**

All analyses will be conducted in a manner consistent with the procedures and assumptions utilized by the City of Venice. Intersection capacity analysis for the study area intersections will be conducted using Synchro Version 10. The Synchro output will utilize the HCM 6<sup>th</sup> Edition reports. Roadway segment capacity analysis will be conducted using the Sarasota County adopted level of service volumes, the FDOT's Generalized Level of Service Volume Tables, ARTPLAN and/or Synchro. The findings of the study will be summarized in a signed and sealed report.

If the above methodology is acceptable, please send written confirmation so we can proceed with the study. Should you have any questions, please feel free to contact me.

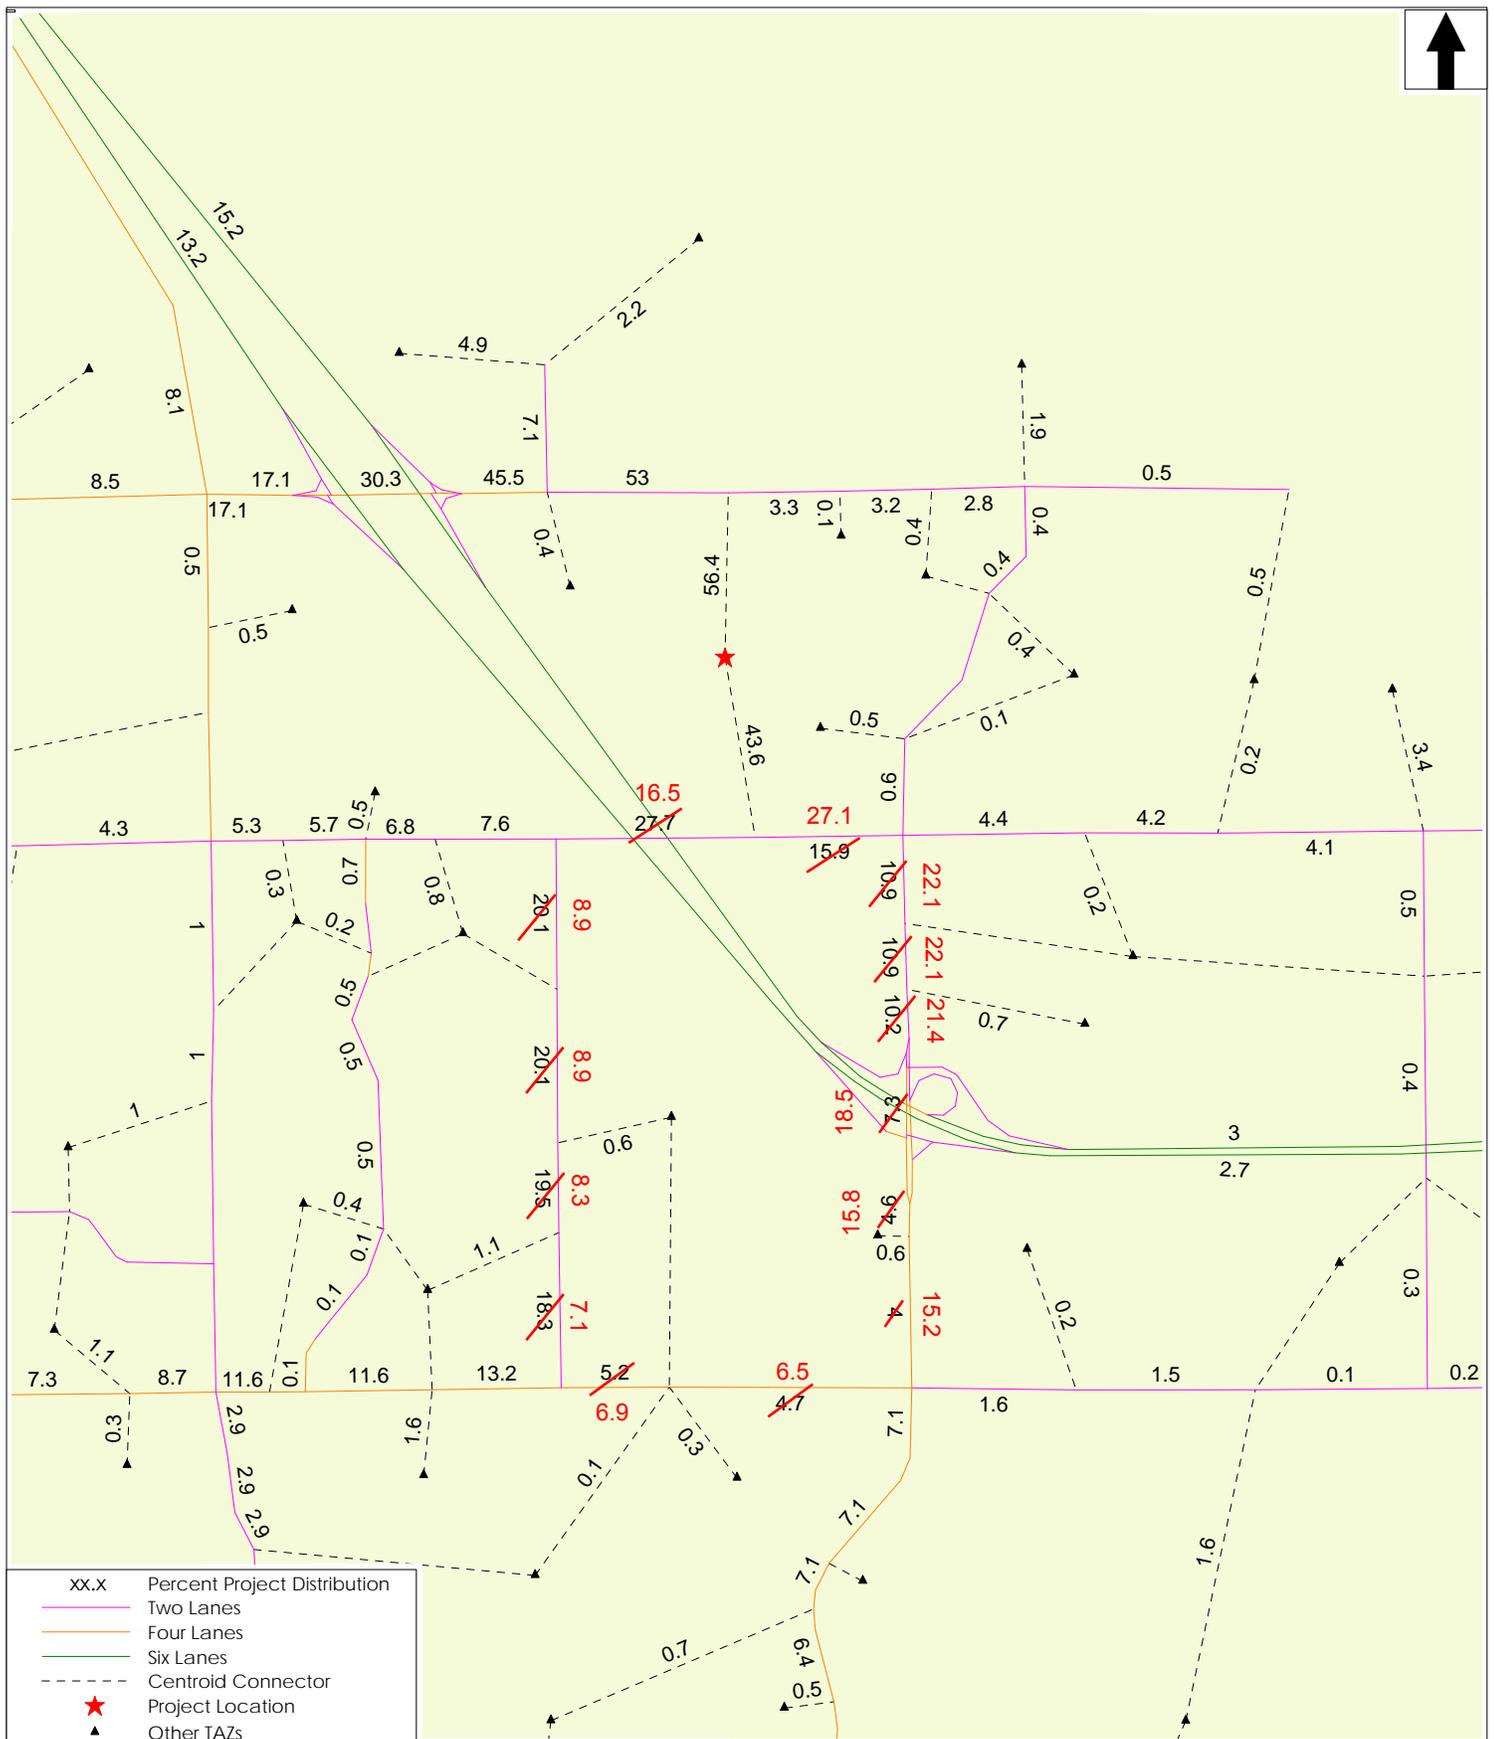

Sincerely,

**Stantec Consulting Services Inc.**

### Intersection Summary

HCM 6th Ctrl Delay	62.2
HCM 6th LOS	E

### Notes

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.  
 Unsignalized Delay for [EBR] is excluded from calculations of the approach delay and intersection delay.

### Intersection Summary

HCM 6th Ctrl Delay 54.9  
 HCM 6th LOS D

### Notes

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.  
 Unsignalized Delay for [EBR] is excluded from calculations of the approach delay and intersection delay.

### Intersection Summary

HCM 6th Ctrl Delay 44.2  
 HCM 6th LOS D

### Notes

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.  
 Unsignalized Delay for [EBR] is excluded from calculations of the approach delay and intersection delay.

### Intersection Summary

HCM 6th Ctrl Delay	29.8
HCM 6th LOS	C

### Notes

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.  
 Unsignalized Delay for [NBR, WBR] is excluded from calculations of the approach delay and intersection delay.
